Product Overview

The PowerFlex 700H AC drive offers a cost-effective, variable speed applications. It is designed to meet the demands for space, flexibility and performance. The many features allow the user to easily configure the drive for most application needs. Ratings currently available include 200...1900 HP output at 480V AC, 150...2400 HP at 600V AC and 160...2000 kW at 690V AC input.

An LCD Human Interface Module (also used with the PowerFlex® 70, 700 and 700S) provides text for startup, metering, programming, and troubleshooting.

PowerFlex 700H AC drives are configurable for Volts-per-Hertz or Sensorless Vector control modes to meet a wide variety of application needs. This control is housed in a module which is separately removable from the power structure. The control module is the same for all drive ratings, simplifying installation and maintenance for the entire product line. Optional I/O is available as 24V DC or 115V AC.

Optional internal communication modules are available as user-installed kits. These provide fast and efficient control and/or data exchange with host controllers over popular interfaces. These interfaces include; DeviceNet™, ControlNet™, Ethernet/IP™, Profibus, Interbus, Remote I/O, Serial Communications and other open control and communication networks. PC tools such as DriveExplorer™ and DriveTools™ SP assist with programming, monitoring and troubleshooting the PowerFlex 700H.

Key Features and Benefits

Excellent Speed Control Performance

- Open-loop speed control with slip compensation
- Excellent torque at low speeds for demanding speed control applications
- Configurable for Volts-per-Hertz or Sensorless Vector control modes for a wide variety of applications
- ATEX certified option for drives that operate in potentially explosive environments

Flexible Programming, Hardware, and Communication Interfaces.

- Advanced features and parameter set modeled after the PowerFlex 700 AC drive.
- Standard I/O includes either 24V or 115V digital I/O plus analog I/O.
- NetLinx communication options, including DeviceNet, ControlNet, and EtherNet/IP networks.

Easy to Use

- Full-featured LCD Human Interface Module (HIM) with multi-line and multi-lingual display simplifies programming.
  - Large and easy to read 7 line x 21 character backlit display
  - Variety of languages (English, French, German, Italian, Spanish, Portuguese, Dutch)
  - Alternate function keys for shortcuts to common tasks
  - "Calculator-like" number pad for fast and easy data entry (Full Numeric version only)
  - Control keys for local start, stop, speed, and direction
  - Remote versions for panel mount application
- S.M.A.R.T. Start and assisted startup routines in the LCD HIM allow for easy configuring and tuning of the drive.
- Pull-apart control terminal blocks allow for easy wiring and quick disconnect of I/O wiring.
- Easy-to-remove control module is common among all PowerFlex 700H power ratings.
- Optimized global voltage settings designed to worldwide standards allow quick set-up anywhere in the world.
- PC-based configuration tools include:
  - DriveExplorer and DriveExplorer Lite - A simple and flexible "On-line" tool for monitoring and configuration while connected to a drive.
  - DriveTools SP - A suite of software tools which provide an intuitive means for programming, troubleshooting and maintaining Allen-Bradley® AC & DC drives.

Premier Integration with PowerFlex Drives

For simplified AC drive start-up and reduced development time using the Allen-Bradley Logix control platform, we've integrated PowerFlex AC drive configuration with RSLogix™ 5000 software. This single-software approach simplifies parameter and tag programming while still allowing stand-alone drive software tool use on the factory floor.

Industry-Standard Packaging

- Modular design and high degree of power structure commonality with equivalent PowerFlex® 700S AC drive ratings for reduced spare parts stocking.
- Standard floor-standing cabinet designs (frame 10 and larger) for compact stand-alone drive applications or multi-drive lineups.
- Along with IP21/UL Type 1 (NEMA 1) package options, many PowerFlex 700H drive ratings are also available in an IP54/UL Type 12 (NEMA 12) package
- Option of internally mounted, or door-mounted NEMA 1 or NEMA 4/12 operator interface
- Line reactor on AC input for all ratings

Support

Rockwell Automation is committed to maintaining and supporting Allen-Bradley drives and installations. Included in this commitment is start-up support and consultation for drive applications.

ProtectionPlus Drive Start-Up

With ProtectionPlus Drives Start-Up Services from Rockwell Automation, users can leverage the extensive product and industry experience of Rockwell Automation technicians to quickly commission drives and reduce the time between integration and actual start-up.

ProtectionPlus Drive Start-Up Services verify drive installation to ensure proper electrical, mechanical and environmental criteria are met. This includes verification of power and I/O wiring to the drive, custom drive configuration/tuning to meet application specific requirements, and diagnosing/troubleshooting problems that occur during a standalone drive start-up. ProtectionPlus can also extend an eligible product parts warranty and add a labor warranty. For more information about onsite support services, including ProtectionPlus Drives Services, contact your local Rockwell Automation sales office or authorized distributor, or visit: http://www.rockwellautomation.com/services/onsite/

(1) These drives have dual current ratings; normal duty applications and heavy duty applications (in parenthesis). The drive may be operated at either rating.
(2) Heavy duty rating is limited to 35° C surrounding air.
(3) The 2 sec. output current is only available at initial start or drive operating at light load.
(4) Frames 10 & up include a Rittal enclosure.
(5) Drives listed Do Not include a Control and I/O option. Refer to page 11 for available options.

Protective Cover for DC Bus or Internal Brake IGBT Terminals

Description	Frame	Cat. No.
Touch Cover - Converts IP00/Open Type drive to IP20/NEMA/UL Type 1. No wiring space provided.	9	20-OPT-TC
Top Hat- Converts IP00/Open Type drive to IP20/NEMA/UL Type 1. Allows for wiring space.	9	20-OPT-TH

1492 Wiring System Modules and Cables

Wiring System Modules and Cables provide an easy means to extend drive control wiring. A pre-wired cable (available in various lengths) plugs into the appropriate drive I/O terminal block. The remaining cable end plugs into the Wiring Module which provides a terminal block for direct I/O connection. See publication 1492-TD008... for detailed information.

1492 Wiring Module and Cable Selection

700H Drive I/O	Wiring Module Description	Wiring Module Cat. No.		Use with Cable (see below…)
		Fixed Terminal Block	Removable Terminal Block

(1) PowerFlex 700H drives have integral input reactors. Output reactors were sized based on the VD rated output currents.
(2) Requires two output reactors wired in parallel.

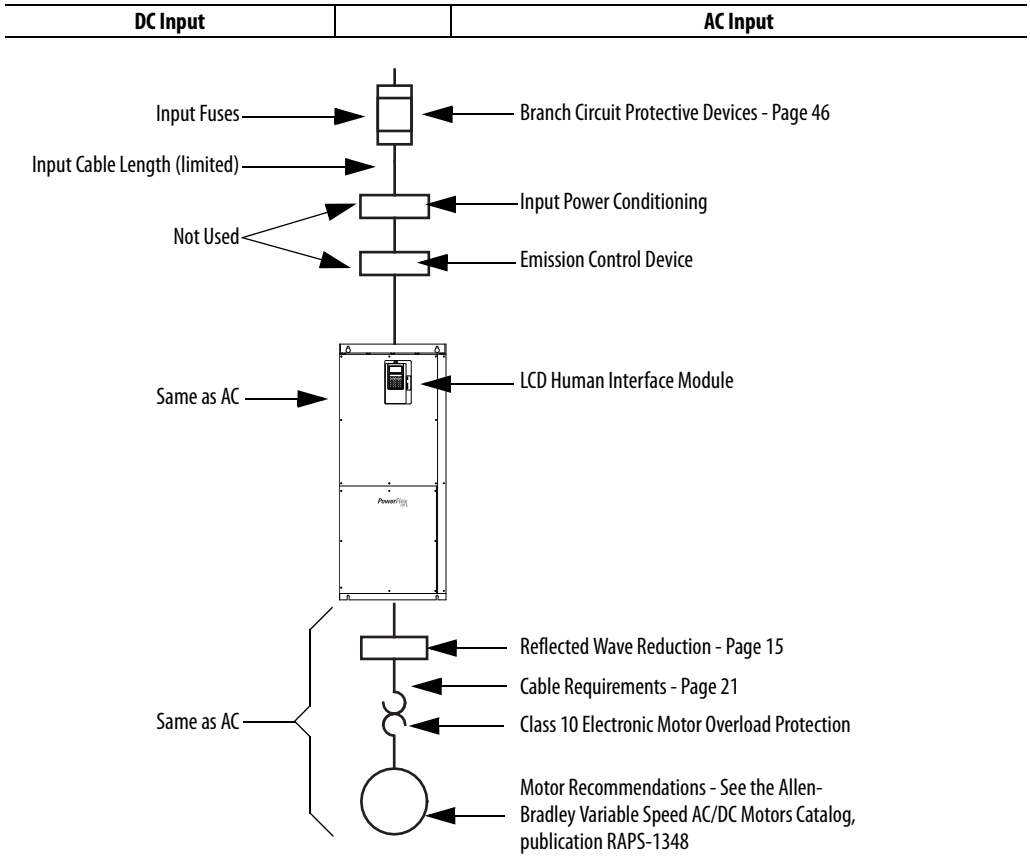
Installation Considerations

Power Wiring

The PowerFlex 700H has the following built in protective features to help simplify installation:

- Ground fault protection during start up and running ensures reliable operation
- Electronic motor overload protection increases motor life
- To ensure compatibility with ungrounded systems, Frame 10 - 14 drives incorporate removable MOV to ground and common mode capacitors to ground. Frame 9 drives can be specially ordered to allow compatibility with ungrounded systems.
- 6 kV transient protection provides increased robustness for 380-480V system voltages

There are many other factors that must be considered for optimal performance in any given application. The block diagram below highlights the primary installation considerations.



Cable Recommendations

- Important points to remember about I/O wiring:
- Always use copper wire.
- Wire with an insulation rating of 600V or greater is recommended.
- Control and signal wires should be separated from power wires by at least 0.3 meters (1 foot).

IMPORTANT I/O terminals labeled "(–)" or "Common" are not referenced to earth ground and are designed to greatly reduce common mode interference. Grounding these terminals can cause signal noise.

Signal and Control Wire Types

Recommended Signal Wire

Signal Type	Wire Type(s)	Description	Minimum Insulation Rating
Analog I/O	Belden 8760/9460 (or equiv.)	0.750 mm^2 (18 AWG), twisted pair, 100% shield with drain. (1)	300V, 75…90 °C (167…194 °F)
	Belden 8770 (or equiv.)	0.750 mm^2 (18 AWG), 3 cond., shielded for remote pot only.	
EMC Compliance	Refer to Installation Manual for details.		

(1) If the wires are short and contained within a cabinet which has no sensitive circuits, the use of shielded wire may not be necessary, but is always recommended.

Recommended Control Wire for Digital I/O

Type	Wire Type(s)	Description	Minimum Insulation Rating
Unshielded	Per US NEC or applicable national or local code	–	300V, 60 °C (140 °F)
Shielded	Multi-conductor shielded cable such as Belden 8770 (or equiv.)	0.750 mm^2 (18 AWG), 3 conductor, shielded.	

Cable Types Acceptable for 200-600 Volt Installations

A variety of cable types are acceptable for drive installations. For many installations, unshielded cable is adequate, provided it can be separated from sensitive circuits. As an approximate guide, allow a spacing of 0.3 meters (1 foot) for every 10 meters (32.8 feet) of length. In all cases, long parallel runs must be avoided. Do not use cable with an insulation thickness less than or equal to 15 mils (0.4 mm/0.015 in.). Use Copper wire only. Wire gauge requirements and recommendations are based on 75 °C. Do not reduce wire gauge when using higher temperature wire.

Unshielded Cable

THHN, THWN or similar wire is acceptable for drive installation in dry environments provided adequate free air space and/or conduit fill rates limits are provided. **Do not use THHN or similarly coated wire in wet areas**. Any wire chosen must have a minimum insulation thickness of 15 mils (0.4 mm/0.015 in.) and should not have large variations in insulation concentricity.

Shielded Cable

Shielded cable contains all of the general benefits of multi-conductor cable with the added benefit of a copper braided shield that can contain much of the noise generated by a typical AC drive. Strong consideration for shielded cable should be given in installations with sensitive equipment such as weigh scales, capacitive proximity switches and other devices that may be affected by electrical noise in the distribution system. Applications with large numbers of drives in a similar location, imposed EMC regulations or a high degree of communications/ networking are also good candidates for shielded cable.

Shielded cable may also help reduce shaft voltage and induced bearing currents for some applications. In addition, the increased impedance of shielded cable may help extend the distance that the motor can be located from the drive without the addition of motor protective devices such as terminator networks. Refer to *Reflected Wave* in "Wiring and Grounding Guidelines for PWM AC Drives," publication DRIVES-IN001.

Consideration should be given to all of the general specifications dictated by the environment of the installation, including temperature, flexibility, moisture characteristics and chemical resistance. In addition, a braided shield should be included and be specified by the cable manufacturer as having coverage of at least 75%. An additional foil shield can greatly improve noise containment.

A good example of recommended cable is Belden® 295xx (xx determines gauge). This cable has four (4) XLPE insulated conductors with a 100% coverage foil and an 85% coverage copper braided shield (with drain wire) surrounded by a PVC jacket.

Other types of shielded cable are available, but the selection of these types may limit the allowable cable length. Particularly, some of the newer cables twist 4 conductors of THHN wire and wrap them tightly with a foil shield. This construction can greatly increase the cable charging current required and reduce the overall drive performance. Unless specified in the individual distance tables as tested with the drive, these cables are not recommended and their performance against the lead length limits supplied is not known.

Armored Cable

Cable with continuous aluminum armor is often recommended in drive system applications or specific industries. It offers most of the advantages of standard shielded cable and also combines considerable mechanical strength and resistance to moisture. It can be installed in concealed and exposed manners and removes the requirement for conduit (EMT) in the installation. It can also be directly buried or embedded in concrete.

Because noise containment can be affected by incidental grounding of the armor to building steel when the cable is mounted, it is recommended the armored cable have an overall PVC jacket. Refer to "Wire Types," in publication DRIVES-IN001, *Wiring and Grounding Guidelines for Pulse Width Modulated (PWM) AC Drives*.

Interlocked armor is acceptable for shorter cable runs, but continuous welded armor is preferred.

Best performance is achieved with 3 spaced ground conductors, but acceptable performance below 200 HP is provided via a single ground conductor.

Recommended Shielded / Armored Cable

Location	Rating/Type	Description
Standard (Option 1)	600V, 90 °C (194 °F) XHHW2/RHW-2 Anixter B209500-B209507, Belden 29501-29507, or equivalent	• Four tinned copper conductors with XLPE insulation. • Copper braid/aluminum foil combination shield and tinned copper drain wire. • PVC jacket.
Standard (Option 2)	Tray rated 600V, 90 °C (194 °F) RHH/RHW-2 Anixter OLF-7xxxxx or equivalent	• Three tinned copper conductors with XLPE insulation. • 5 mil single helical copper tape (25% overlap min.) with three bare copper grounds in contact with shield. • PVC jacket.
Class I & II; Division I & II	Tray rated 600V, 90 °C (194 °F) RHH/RHW-2 Anixter 7V-7xxxx-3G or equivalent	• Three bare copper conductors with XLPE insulation and impervious corrugated continuously welded aluminum armor. • Black sunlight resistant PVC jacket overall. • Three copper grounds on #10 AWG and smaller.

Single-Phase Input Power

The PowerFlex 700H drives are typically used with a three-phase input supply. The drives have been listed by UL to operate on single-phase input power with the requirement that the output current is derated by 80% of the three-phase ratings beginning on page 37.

Maximum Motor Cable Lengths

IMPORTANT In the following tables, a "●" in the TFB2 column indicates that this drive rating can be used with an Allen-Bradley Terminator, catalog number 1204-TFB2.

- For the Terminator, the maximum cable length is 182.9 meters (600 feet) for 400/480/600V drives (not 690V). The PWM frequency must be 2 kHz. Only 1204-TFB2 terminators are compatible with PowerFlex 700H AC drives.

The 1321-RWR is a complete reflected wave reduction solution available for many of the PowerFlex drives. If available, a 1321-RWR catalog number will be indicated in the "Reactor/RWR" column. When not available, use the reactor and resistor information provided to build a solution.

For Further Information on ...	see Publication...

(1) Frame 12 drives have dual inverters and require two output reactors. The resistor ratings are per phase values for each reactor.
(2) Some Frame 13 drives require two output reactors to match drive amp rating. The resistor ratings are per phase values for each reactor.
(3) Resistor specification is based on two cables per phase.
(4) Resistor specification is based on three cables per phase.
(5) Resistor specification is based on four cables per phase.

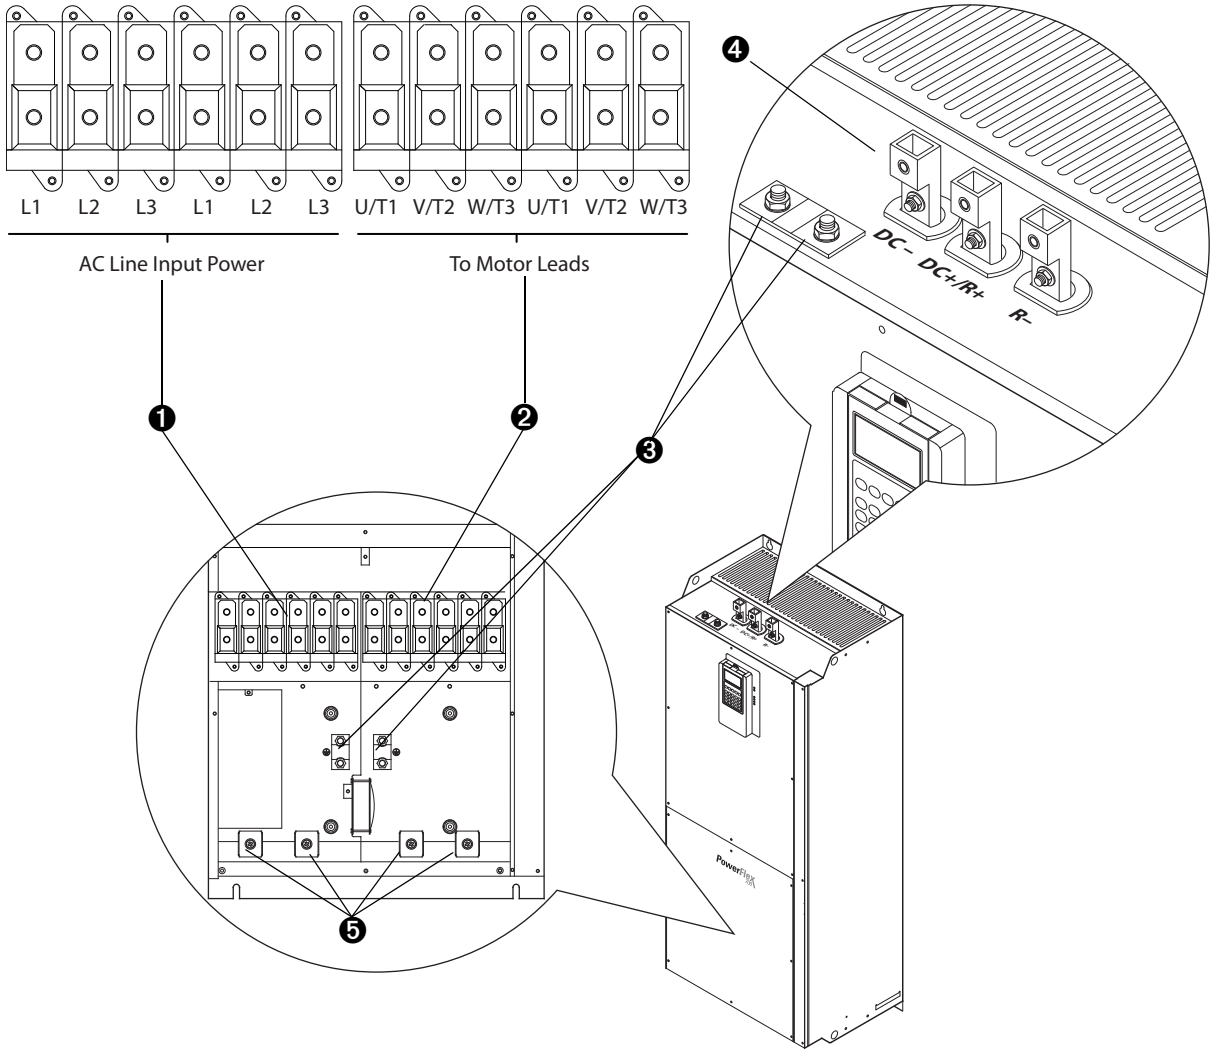
Power Terminal Block Specifications

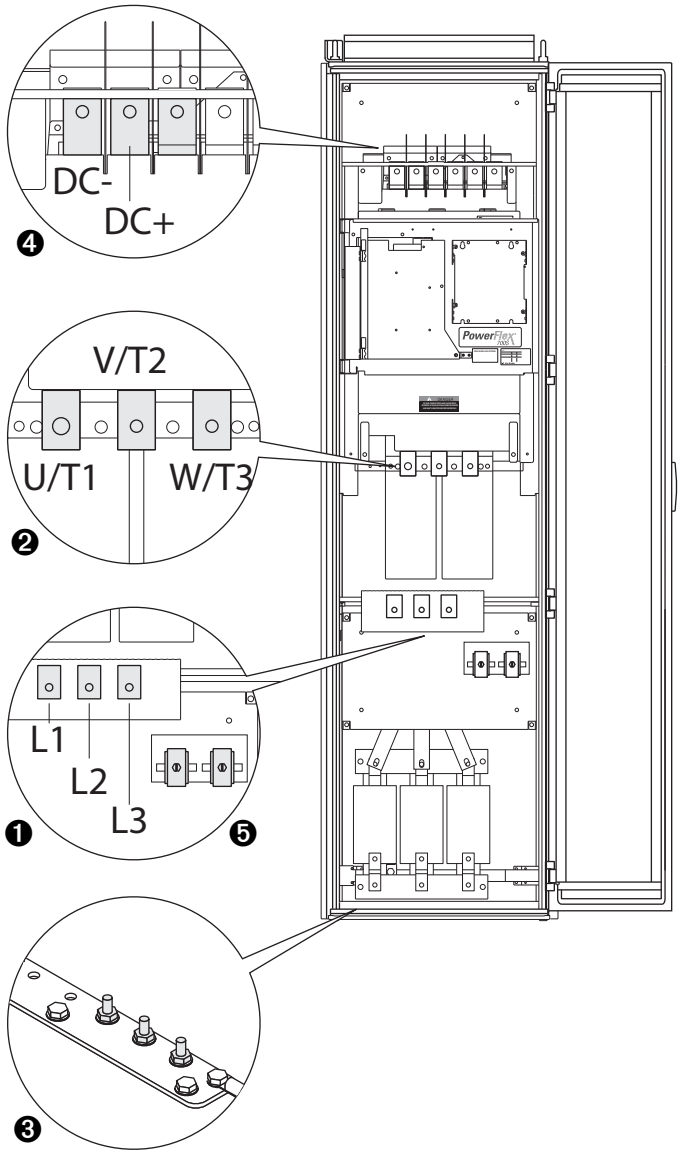
Frame 9



No.	Name	Description	Wire Size Range [3]		Torque
			Maximum	Minimum	Recommended
❶	Input Power Terminal Block [1] L1, L2, L3	Input power	185.0 mm^2 (350 MCM)	95.0 mm^2 (4/0 AWG)	40 N•m (354 lb•in)
❷	Output Power Terminal Block [2] U/T1, V/T2, W/T3	Motor connections	185.0 mm^2 (350 MCM)	95.0 mm^2 (4/0 AWG)	40 N•m (354 lb•in)
❸	SHLD Terminal, PE, Motor Ground	Terminating point for wiring shields	95.0 mm^2 (4/0 AWG)	5.0 mm2 (10 AWG)	22 N•m (195 lb•in)
❹	DC Bus [2] (2 Terminals; DC–, DC+)	DC input or external brake resistor *(Internal Brake option not ordered)*	185.0 mm^2 (350 MCM)	95.0 mm^2 (4/0 AWG)	40 N•m (354 lb•in)
	DC Bus w/Brake [3] (3 Terminals; DC–, DC+/R+, R–)	DC input/internal brake *(Internal Brake option is ordered)*	185.0 mm^2 (350 MCM)	95.0 mm^2 (4/0 AWG)	40 N•m (354 lb•in)
❺	Cable Clamp for Shield				

(1) Do Not exceed maximum wire size. Parallel connections may be required.
(2) DC terminal and brake lugs can be removed.
(3) Maximum/minimum sizes that the terminal block will accept - these are not recommendations.

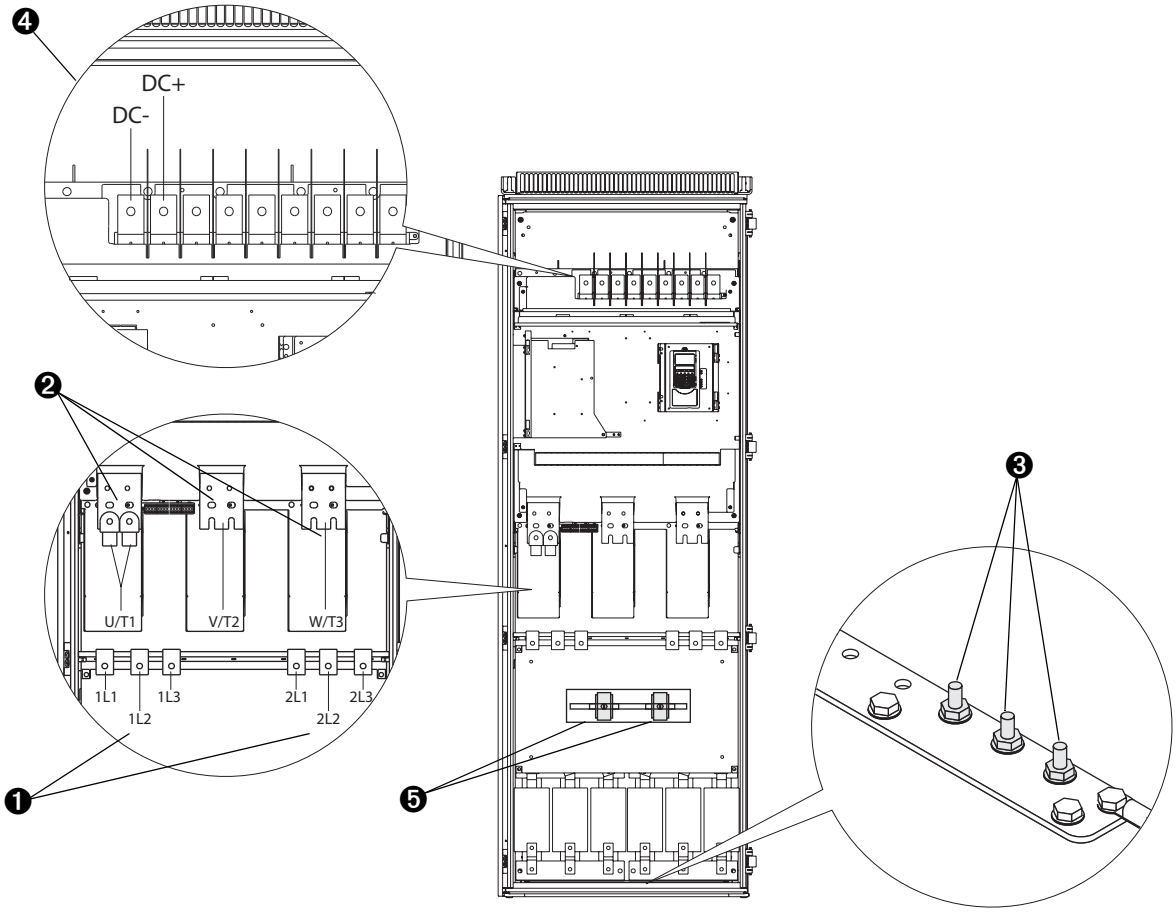
Frame 10



No.	Name	Description	Wire Size Range (1)(2)		Torque	Terminal Bolt Size (3)(4)
			Maximum	Minimum	Recommended	
❶	Input Power Terminal Block (3) L1, L2, L3	Input power	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12
❷	Output Power Terminal Block (3) U/T1, V/T2, W/T3	Motor connections	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12
❸	SHLD Terminal, PE, Motor Ground (3)	Terminating point for wiring shields	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M10
❹	DC Bus (3) (2 Terminals; DC–, DC+)	DC input or external brake	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12
❺	Cable Clamp for Shield					

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations.
(2) Do Not exceed maximum wire size. Parallel connections may be required.
(3) These connections are bus bar type terminations and require the use of lug type connectors.
(4) Apply counter torque to the nut on the other side of terminations when tightening or loosening the terminal bolt in order to avoid damage to the terminal.

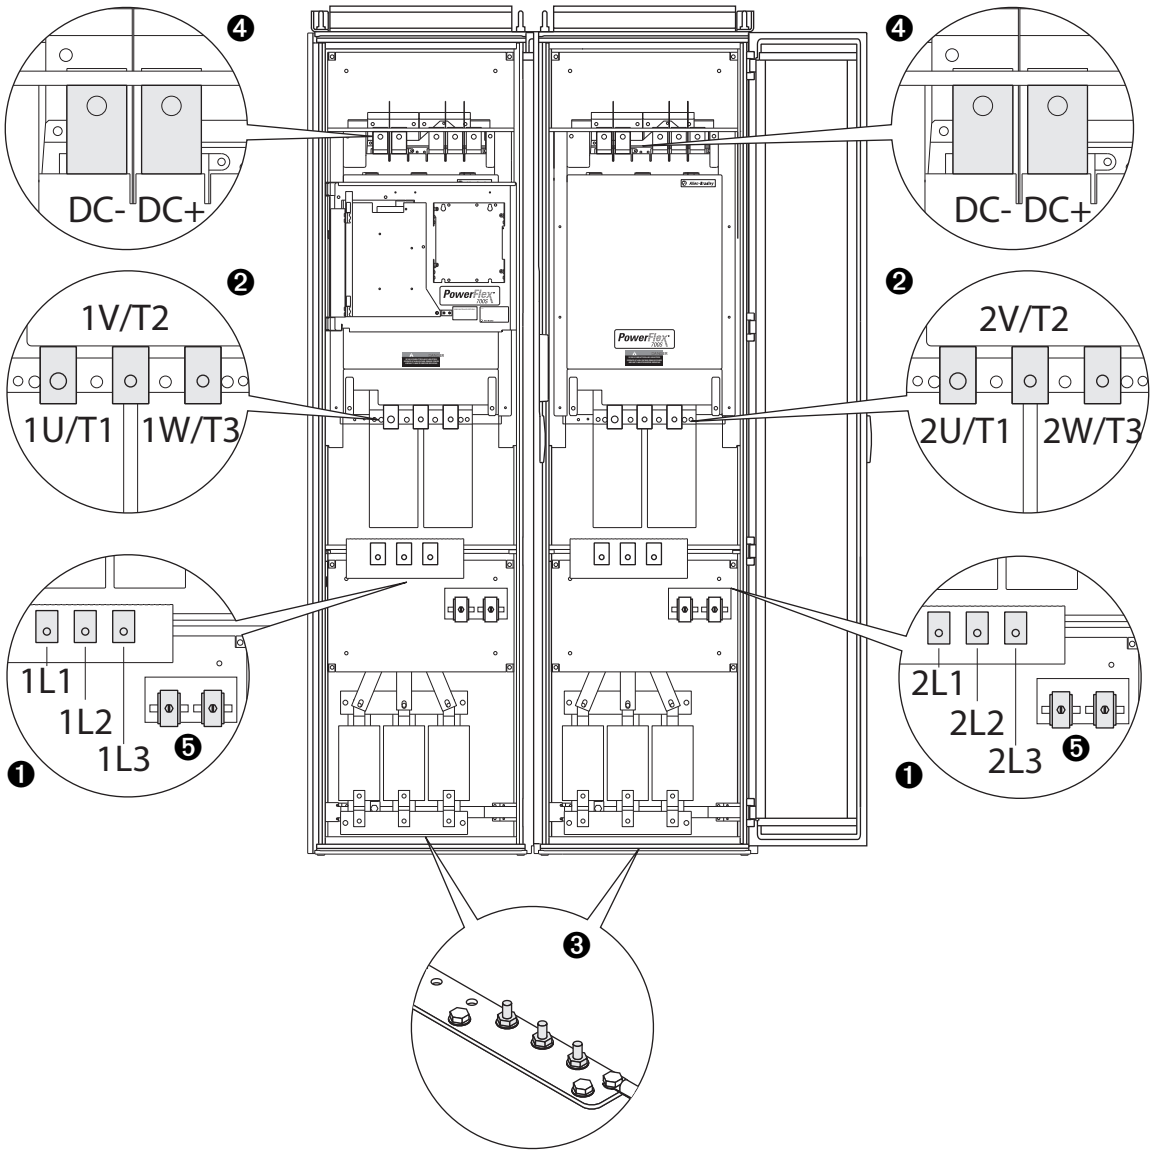
Frame 11



No.	Name	Description	Wire Size Range (1)(2)		Torque	Terminal Bolt Size (3)(4)
			Maximum	Minimum	Recommended	
❶	Input Power Terminal Block (3) 1L1, 1L2, 1L3, 2L1, 2L2, 2L3	AC Input power	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12
❷	Output Power Terminal Block (3) U/T1, V/T2, W/T3	Motor connections	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12
❸	SHLD Terminal, PE, Motor Ground (3)	Terminating point for wiring shields	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M10
❹	DC Bus (3) (2 Terminals; DC–, DC+)	DC input or external brake	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12
❺	Cable Clamp for Shield					

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations.
(2) Do Not exceed maximum wire size. Parallel connections may be required.
(3) These connections are bus bar type terminations and require the use of lug type connectors.
(4) Apply counter torque to the nut on the other side of terminations when tightening or loosening the terminal bolt in order to avoid damage to the terminal.

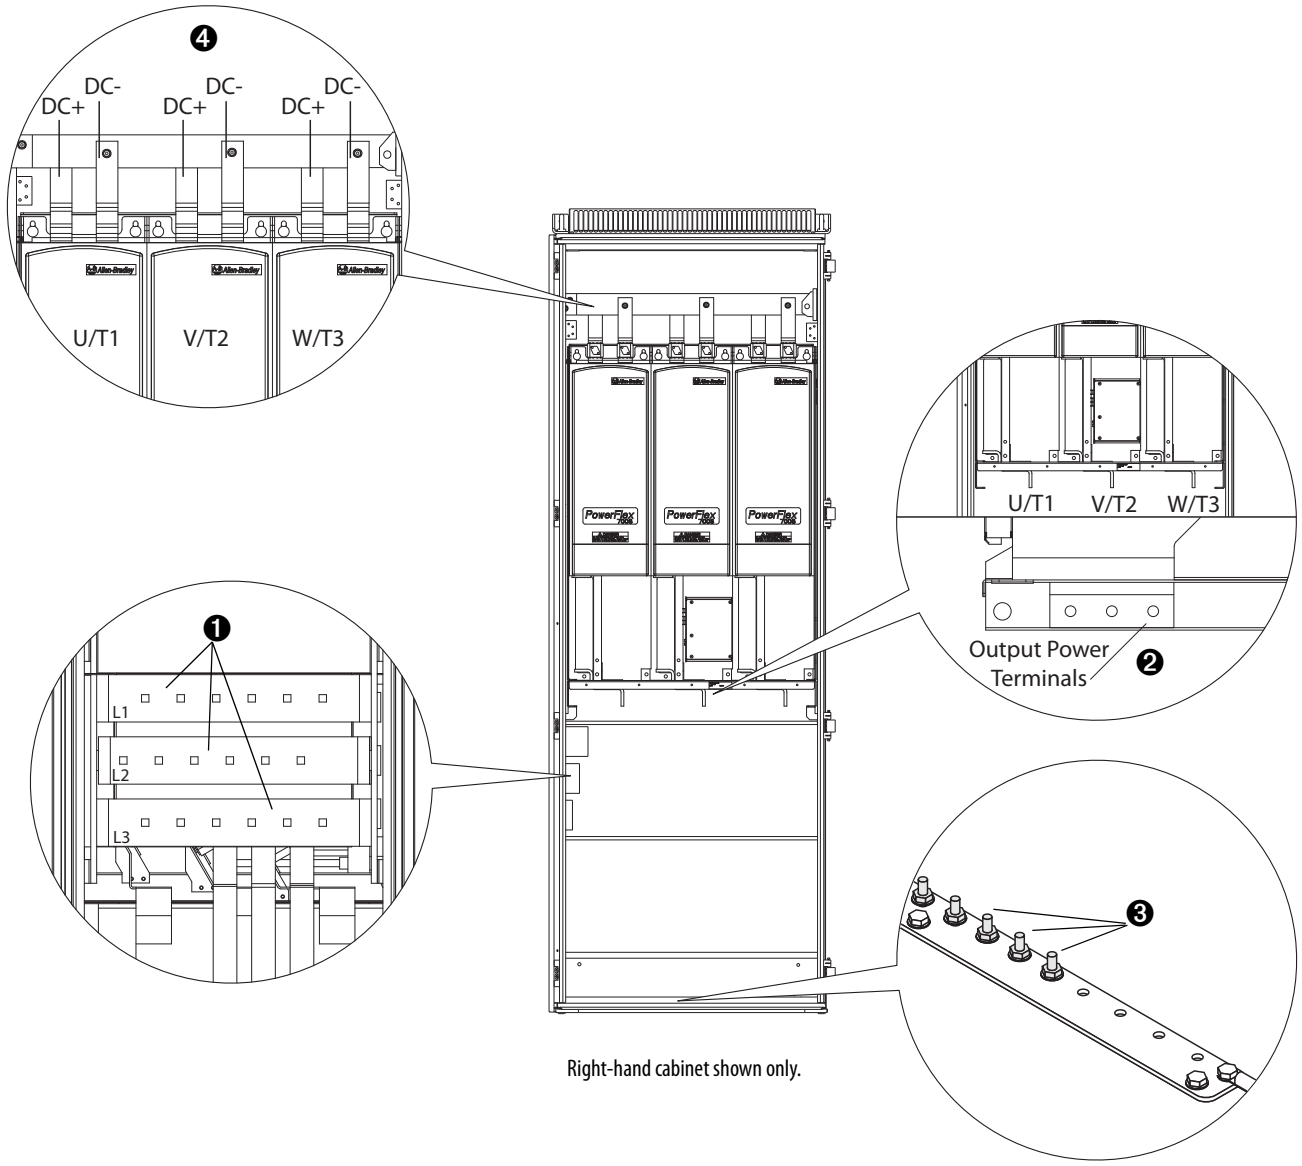
Frame 12



No.	Name	Description	Wire Size Range (1)(2)		Torque	Terminal Bolt Size (3)(4)
			Maximum	Minimum	Recommended	
❶	Input Power Terminal Block (3) 1L1, 1L2, 1L3, 2L1, 2L2, 2L3	Input power	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in	M12
❷	Output Power Terminal Block (3) 1U/1T1, 1V/1T2, 1W/1T3, 2U/2T1, 2V/2T2, 2W/2T3	Motor connections	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12
❸	SHLD Terminal, PE, Motor Ground (3)	Terminating point for wiring shields	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M10
❹	DC Bus (3) (2 Terminals; DC–, DC+)	DC input or external brake	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12
❺	Cable Clamp for Shield					

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations.
(2) Do Not exceed maximum wire size. Parallel connections may be required.
(3) These connections are bus bar type terminations and require the use of lug type connectors.
(4) Apply counter torque to the nut on the other side of terminations when tightening or loosening the terminal bolt in order to avoid damage to the terminal.

Frame 13

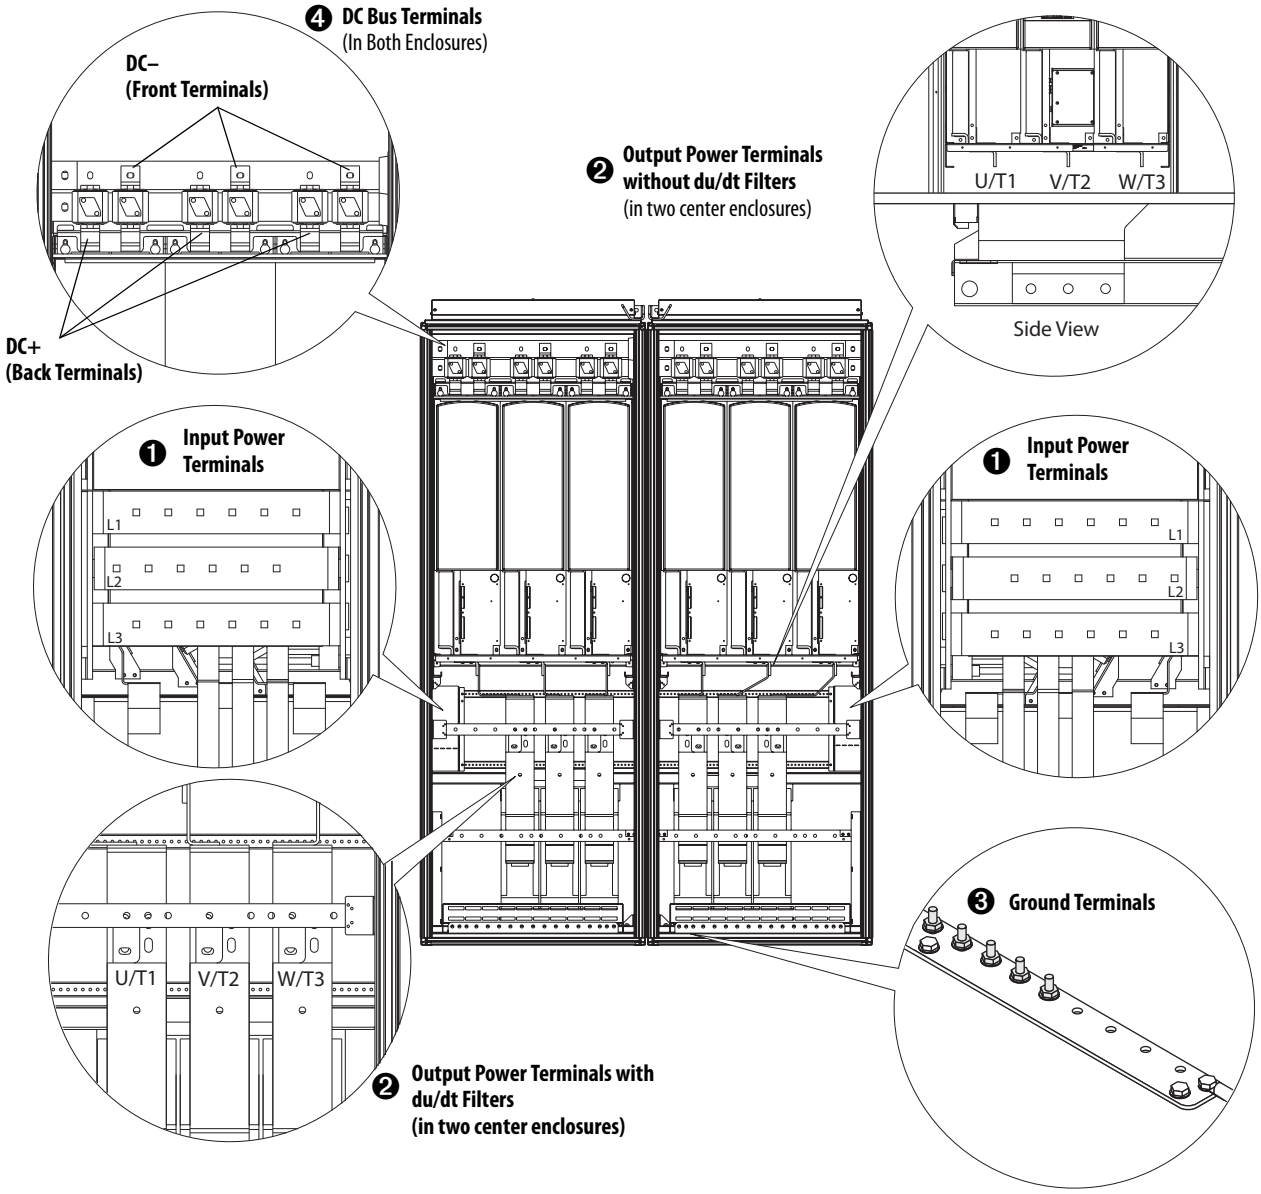


Right-hand cabinet shown only.

No.	Name	Description	Wire Size Range [1][2]		Torque	Terminal Bolt Size [3][4]
			Maximum	Minimum	Recommended	
❶	Input Power Terminal Block [1] L1, L2, L3	Input power	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12
❷	Output Power Terminal Block [3] U/T1, V/T2, W/T3	Motor connections	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12
❸	SHLD Terminal, PE, Motor Ground [3]	Terminating point for wiring shields	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M10
❹	DC Bus [3] (3 Terminals; DC–, DC+)	DC input or external brake	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations.
(2) Do Not exceed maximum wire size. Parallel connections may be required.
(3) These connections are bus bar type terminations and require the use of lug type connectors.
(4) Apply counter torque to the nut on the other side of terminations when tightening or loosening the terminal bolt in order to avoid damage to the terminal.

Frame 14 (Example of Drive Above 1500A Shown)

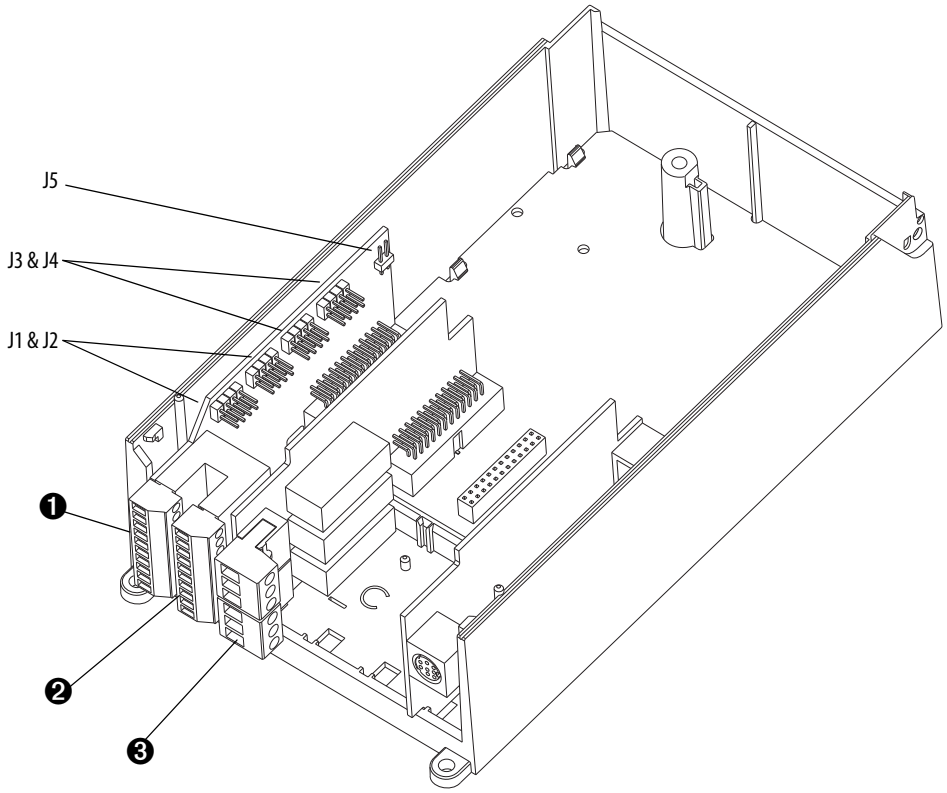


No.	Name	Description	Wire Size Range [1][2]		Torque	Terminal Bolt Size [3][4]
			Maximum	Minimum	Recommended	
❶	Input Power Terminal Block [1] L1, L2, L3	Input power	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12
❷	Output Power Terminal Block [3] U/T1, V/T2, W/T3	Motor connections	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12
❸	SHLD Terminal, PE, Motor Ground [3]	Terminating point for wiring shields	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M10
❹	DC Bus [3] (3 Terminals; DC–, DC+)	DC input or external brake	300 mm^2 (600 MCM)	2.1 mm^2 (14 AWG)	40 N•m (354 lb•in)	M12

(1) Maximum/minimum sizes that the terminal block will accept - these are not recommendations.
(2) Do Not exceed maximum wire size. Parallel connections may be required.
(3) These connections are bus bar type terminations and require the use of lug type connectors.
(4) Apply counter torque to the nut on the other side of terminations when tightening or loosening the terminal bolt in order to avoid damage to the terminal.

Control Terminals

I/O Terminal Blocks & Jumpers



I/O Terminal Block Specifications

No.	Name	Description	Wire Size Range[1]		Torque	
			Maximum	Minimum	Maximum	Recommended
1	Analog I/O	Analog I/O Signals	2.5 mm^2 (14 AWG)	0.5 mm^2 (22 AWG)	0.2 N•m (1.8 lb•in)	0.2 N•m 1.8 (lb•in)
2	Digital Inputs	Digital Input Signals	2.5 mm^2 (14 AWG)	0.5 mm^2 (22 AWG)	0.2 N•m 1.8 (lb•in)	0.2 N•m 1.8 (lb•in)
3	Digital Outputs	Digital Out Relays	2.5 mm^2 (14 AWG)	0.5 mm^2 (22 AWG)	0.5 N•m 4.5 (lb•in)	0.5 N•m 4.5 (lb•in)

(1) Maximum/Minimum sizes that the terminal block will accept - these are not recommendations.

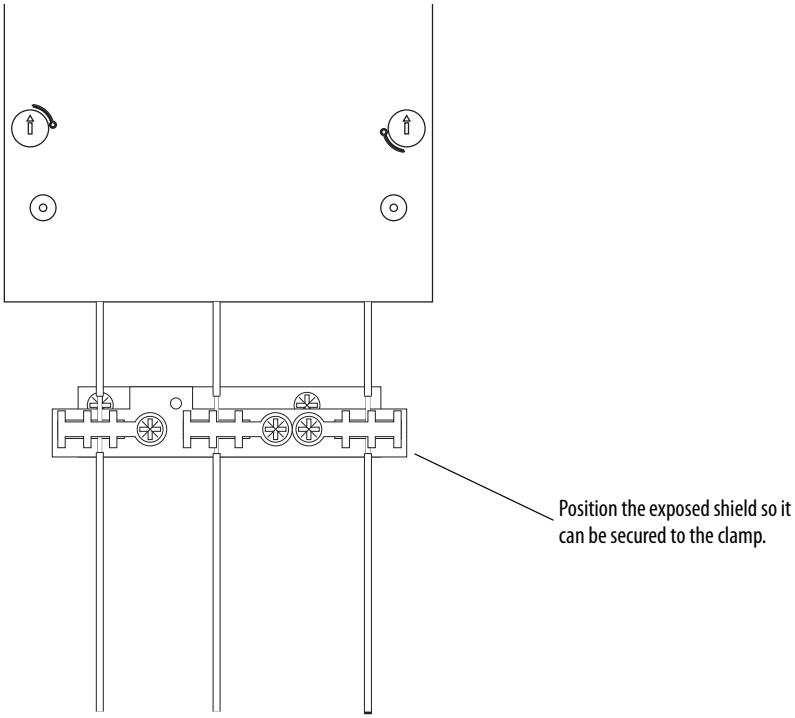
I/O Terminal Designations

	No.	Signal	Factory Default	Description	Related Parameter(s)
	1	Analog In 1 (–) (1)	(4)	Isolated (5), bipolar, differential, 9 bit & sign, 88k ohm input impedance. A jumper (page 35) selects: 0-10V, ±10V, 4-20 mA. Default: 0-10V (Ri =200k), 4-20 mA (Ri=100 ohm).	320 - 327
	2	Analog In 1 (+) (1)			
	3	Analog In 2 (–) (1)			
	4	Analog In 2 (+) (1)			
	5	–10V Pot Reference	–	2k ohm minimum, 10 mA maximum load, 1% accuracy.	
	6	Pot Common (GND)		For (+) and (–) 10V pot references.	
	7	+10V Pot Reference	–	2k ohm minimum, 10mA maximum load, 1% accuracy.	
	8	Analog Out 1 (+)	(4)	Bipolar (current out is not bipolar), 9 bit & sign, 2k ohm minimum load. A jumper (see page 35) selects: 0-10V, ±10V, 4-20mA.	340 - 347
	9	Analog Out Common			
	10	Analog Out 2 (+)			
	11	Digital In 1	Stop - CF	115V AC, 50/60 Hz - Opto isolated Low State: less than 30V AC High State: greater than 40V AC 24V DC - Opto isolated (250V) Low State: less than 5V DC High State: greater than 20V DC 11.2 mA DC Enable: Digital Input 6 is jumper selectable for HW Enable. On-Time: < 16.7 ms, Off-Time < 1 ms	361 - 366
	12	Digital In 2	Start		
	13	Digital In 3	Auto/Man		
	14	Digital In 4	Speed Sel 1		
	15	Digital In 5	Speed Sel 2		
	16	Digital In 6/Hardware Enable, see page 36	Speed Sel 3		
	17 18	Digital In Common		Allows source or sink operation. Terminals 17/18 & 19 can also be used to provide backup power to DPI and control devices.	
	19	+24V DC (2)	–	Drive supplied logic input power.	
	20	24V Common (2)	–	Common for internal power supply.	
	21	Digital Out 1 – N.C. (3)	Fault	Max. Resistive Load: 240V AC/30V DC – 1200VA, 150 W Max. Current: 5A, Min. Load: 10 mA Max. Inductive Load: 240V AC/30V DC – 840VA, 105 W Max. Current: 3.5A, Min. Load: 10 mA	380 - 391
	22	Digital Out 1 Common			
	23	Digital Out 1 – N.O. (3)	NOT Fault		
	24	Digital Out 2 – N.C. (3)	NOT Run		
	25	Digital Out 2/3 Com.			
	26	Digital Out 3 – N.O. (3)	Run		

(1) Important: Input must be configured with a jumper. Drive damage may occur if jumper is not installed properly. Refer to page 35.
(2) 150mA maximum Load. Not present on 115V versions. Can be used to provide control power from an external 24V source when main power is not applied. Refer to page 36.
(3) Contacts in unpowered state. Any relay programmed as Fault or Alarm will energize (pick up) when power is applied to drive and de-energize (drop out) when a fault or alarm exists. Relays selected for other functions will energize only when that condition exists and will deenergize when condition is removed.
(4) These inputs/outputs are dependant on a number of parameters (see "Related Parameters").
(5) Differential Isolation - External source must be maintained at less than 160V with respect to PE. Input provides high common mode immunity.

I/O Cable Grounding

When installing/stripping shielded multi-conductor cable for analog and digital I/O, allow sufficient distance from the terminal plug to permit attachment to the cable clamp for grounding.



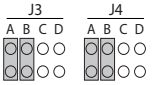
Note: This clamp is not designed for strain relief.

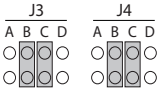
Analog I/O Configuration

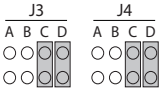
IMPORTANT Analog I/O must be configured through programming, as well as the jumpers shown below. Refer to publication 20C-PM001, PowerFlex 700H Adjustable Frequency AC Drive, Programming Manual.

I/O Configuration

See I/O Terminal Blocks & Jumpers on page 33 for jumper locations.

Signal	Jumper	Setting		
Analog Inputs	J1 (Analog In 1) J2 (Analog In 2)	0…20 mA	0…10V	±10V
				Analog Outputs	J3 (Analog Out 1) J4 (Analog Out 2)	0…20 mA	0…10V	±10V
				






Hardware Enable Circuitry

By default, the user can program a digital input as an Enable input. The status of this input is *interpreted by drive software*. If the application requires the drive to be disabled *without* software interpretation, a "dedicated" hardware enable configuration can be utilized. This is done by removing jumper J5 and wiring the enable input to "Digital In 6" (see below). Verify that [Digital In6 Sel], parameter 366 is set to "1, Enable." See I/O Terminal Blocks & Jumpers on page 33 for jumper J5 location.

Hardware Enable Configuration

Signal	Jumper	Setting	
Hardware Enable	J5	Hardware Enable	Input Programmable (No Hardware Enable)
		J5 A B	J5 A B

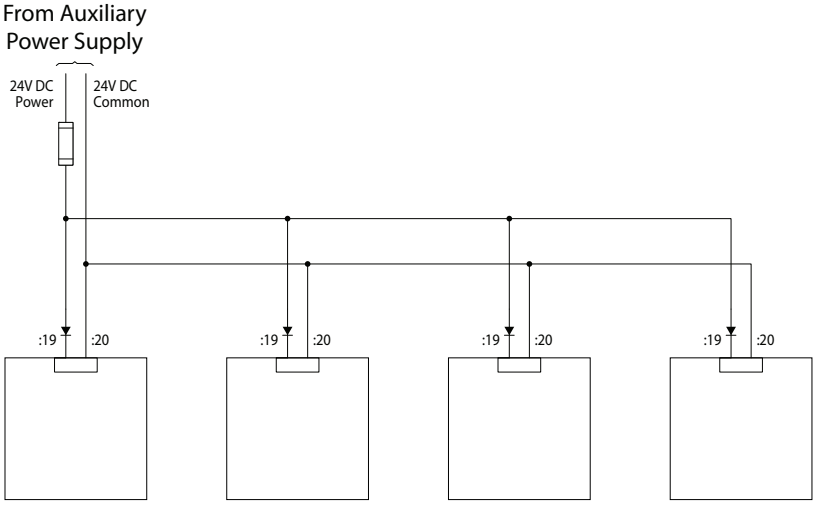
Auxiliary Power Supply

You may use an auxiliary power supply to keep the PowerFlex 700H Control Unit energized, when input power is deenergized. This provides back-up power for the Control Unit and is sufficient for setting parameters. Connect 24V DC power to pin 19 and 24V DC common to pin 20 of the 24V DC version of the I/O card.

Auxiliary Power Supply Specifications

Voltage	Current (Min)	Current (Max)
24V DC ± 15%	150 mA	250 mA

If 24V terminals of several drives are connected in parallel, a diode circuit is recommended to block current flow in the opposite direction. Reverse current flow could damage the control board.



Drive Ratings

The tables on the following pages provide drive ratings (including continuous, 1 minute and 3 seconds), PWM frequency ratings, ambient operating temperatures and watts loss information.

Branch Circuit Short Circuit Protection

Integral solid state short circuit protection does not provide branch circuit protection. Branch circuit protection must be provided in accordance with the National Electrical Code and any additional local codes, or the equivalent.

Fusing and Circuit Breakers

The tables on the following pages provide recommended AC line input fuse and circuit breaker information. See Fusing on page 46 and Circuit Breakers on page 46 below for UL and IEC requirements. Sizes listed are the recommended sizes based on 40 °C (104 °F) and the U.S. NEC. Other country, state, or local codes can require different ratings. Tables with DC link fuse recommendations for DC input drives are also provided.

Fusing

The recommended fuse types are listed below. If available current ratings do not match those listed in the tables provided, chose the next higher fuse rating.

- IEC – BS88 (British Standard) Parts 1 & 2, EN60269-1, Parts 1 & 2 (1) type gG or equivalent should be used.
- UL – UL requirements specify that UL Class CC, T, or J fuses must be used for all drives in this section.

Circuit Breakers

The 'non-fuse' listings in the following tables include inverse time circuit breakers and instantaneous trip circuit breakers (motor circuit protectors). If one of these is chosen as the desired protection method, the following requirements apply:

- IEC – Both types of circuit breakers are acceptable for IEC installations.
- UL – Only inverse time circuit breakers are acceptable for UL installations.

(1) Typical designations include, but may not be limited to the following; Parts 1 & 2:AC, AD, BC, BD, CD, DD, ED, EFS, EF, FF, FG, GF, GG, GH

(1) Minimum protection device size is the lowest rated device that supplies maximum protection without nuisance tripping.
(2) Maximum protection device size is the highest rated device that supplies drive protection. For US NEC, minimum size is 125% of motor FLA. Ratings shown are maximum.
(3) These fuses and disconnect are supplied with AC input NEMA/UL Type 1 drives.
(4) Inverse time breaker. Ratings shown are maximum.
(5) Maximum allowable rating by US NEC. Exact size must be chosen for each installation.
(6) Motor Circuit Protector - instantaneous trip circuit breaker. For US NEC minimum size is 125% of motor/drive FLA. Ratings shown are suggested. Instantaneous trip settings must be set to US NEC code. Not to exceed 1300% FLA.

(1) Minimum protection device size is the lowest rated device that supplies maximum protection without nuisance tripping.
(2) Maximum protection device size is the highest rated device that supplies drive protection. For US NEC, minimum size is 125% of motor FLA. Ratings shown are maximum.
(3) These fuses and disconnect are supplied with AC input NEMA/UL Type 1 drives.
(4) Inverse time breaker. Ratings shown are maximum.
(5) Maximum allowable rating by US NEC. Exact size must be chosen for each installation.
(6) Motor Circuit Protector - instantaneous trip circuit breaker. For US NEC minimum size is 125% of motor/drive FLA. Ratings shown are suggested. Instantaneous trip settings must be set to US NEC code. Not to exceed 1300% FLA.

(3) These fuses and disconnect are supplied with AC input NEMA/UL Type 1 drives.
(4) Inverse time breaker. Ratings shown are maximum.
(5) Maximum allowable rating by US NEC. Exact size must be chosen for each installation.
(6) Motor Circuit Protector - instantaneous trip circuit breaker. For US NEC minimum size is 125% of motor/drive FLA. Ratings shown are suggested. Instantaneous trip settings must be set to US NEC code. Not to exceed 1300% FLA.

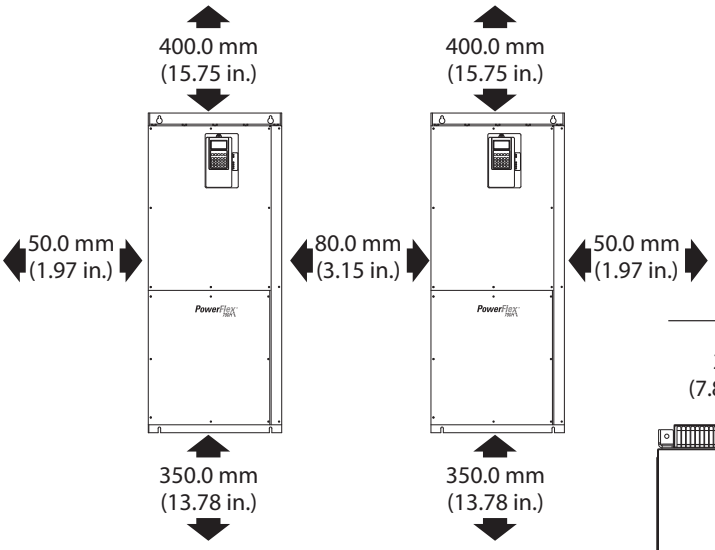
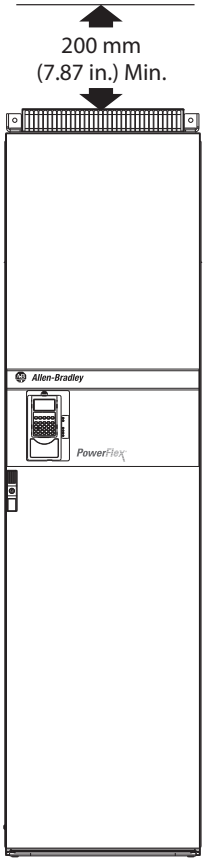
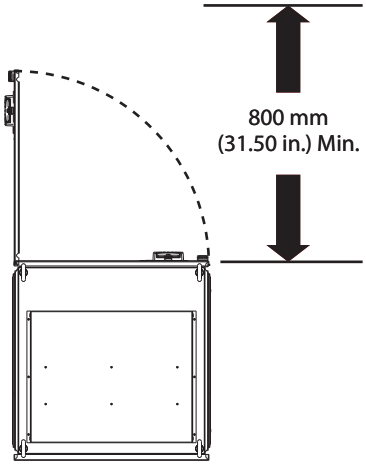
Minimum Mounting Clearances

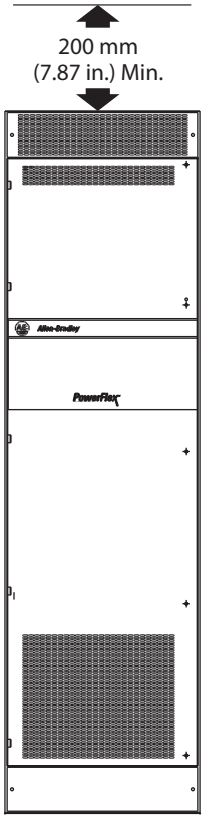
Frame 9



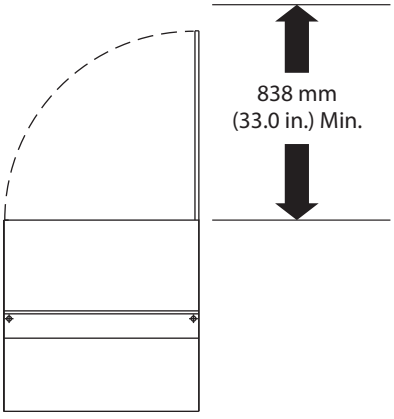


Frames 10…14 (NEMA/UL Type 1 - IP21 Enclosure (Frame 10 shown)





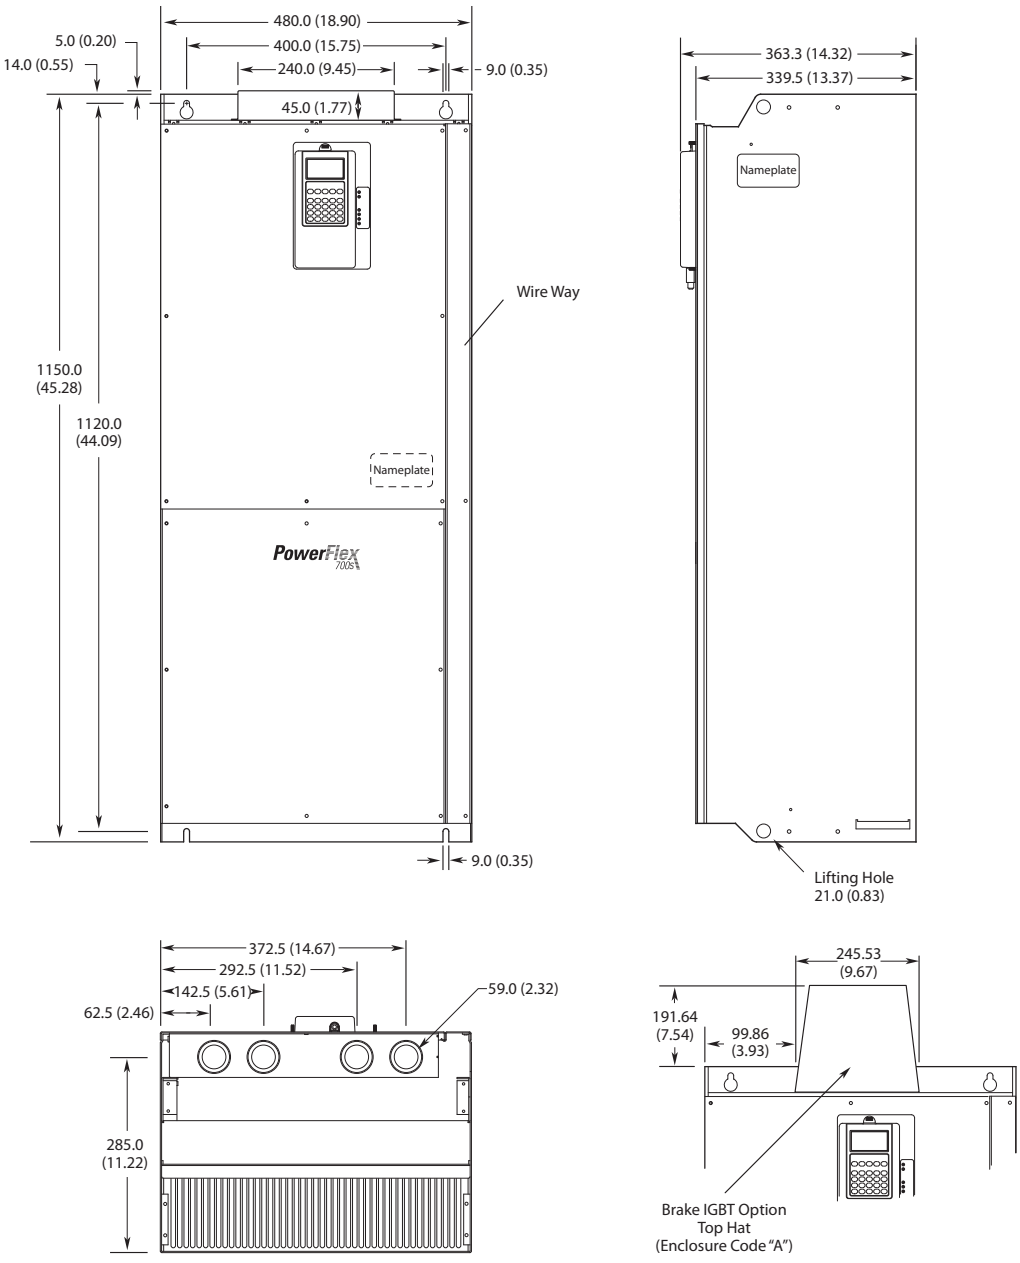
Frames 10…12 (NEMA/UL Type 1 - IP20 MCC Enclosure (Frame 10 shown)



Approximate Dimensions

Frame 9

Dimensions are in millimeters and (inches).

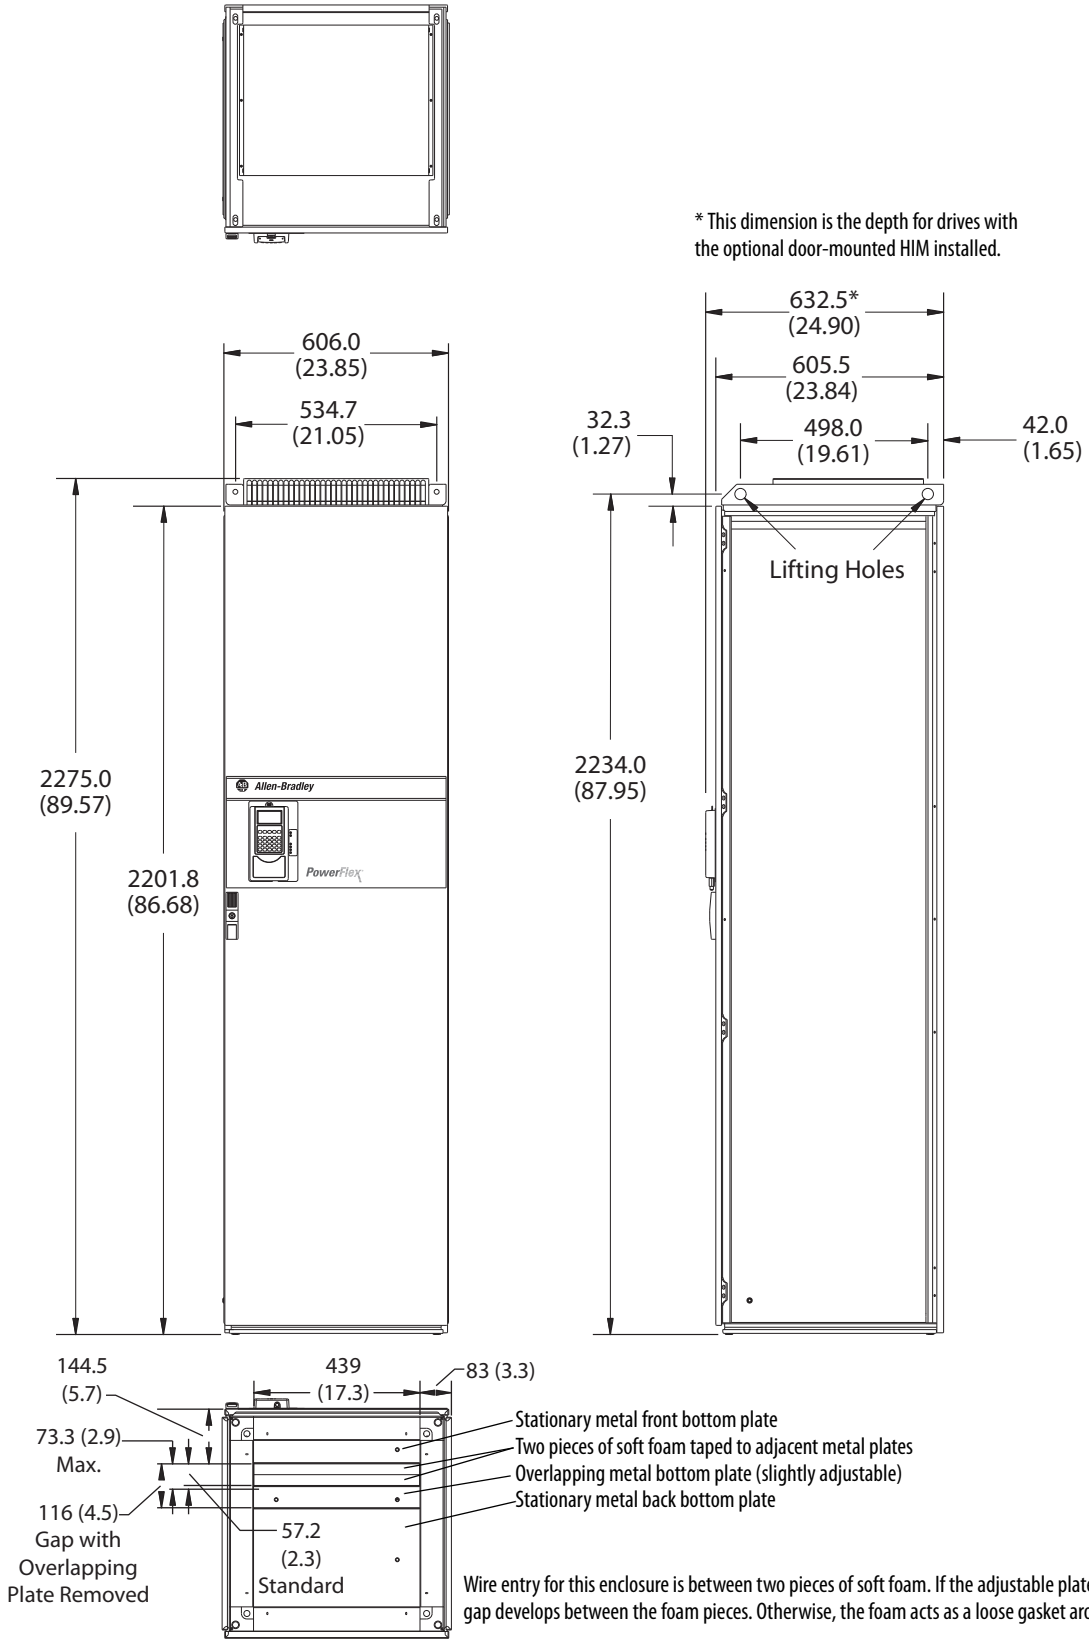


Frame 9 Drive Weights

Type	Weight kg (lb)
400V/480V AC, 261 Amp Drive & Enclosure	143 (315)
400V/480V AC, 300 Amp Drive & Enclosure	151 (333)
540/650V DC, 261 Amp Drive & Enclosure	109 (240)
540/650V DC, 300 Amp Drive & Enclosure	117 (257)
600/690V AC Drive & Enclosure	143 (315)
810/932V DC Drive & Enclosure	109 (240)

Frame 10 Enclosure Code A (NEMA/UL Type 1, IP21) and M (NEMA/UL Type 1, IP21 w/Conformal Coat)

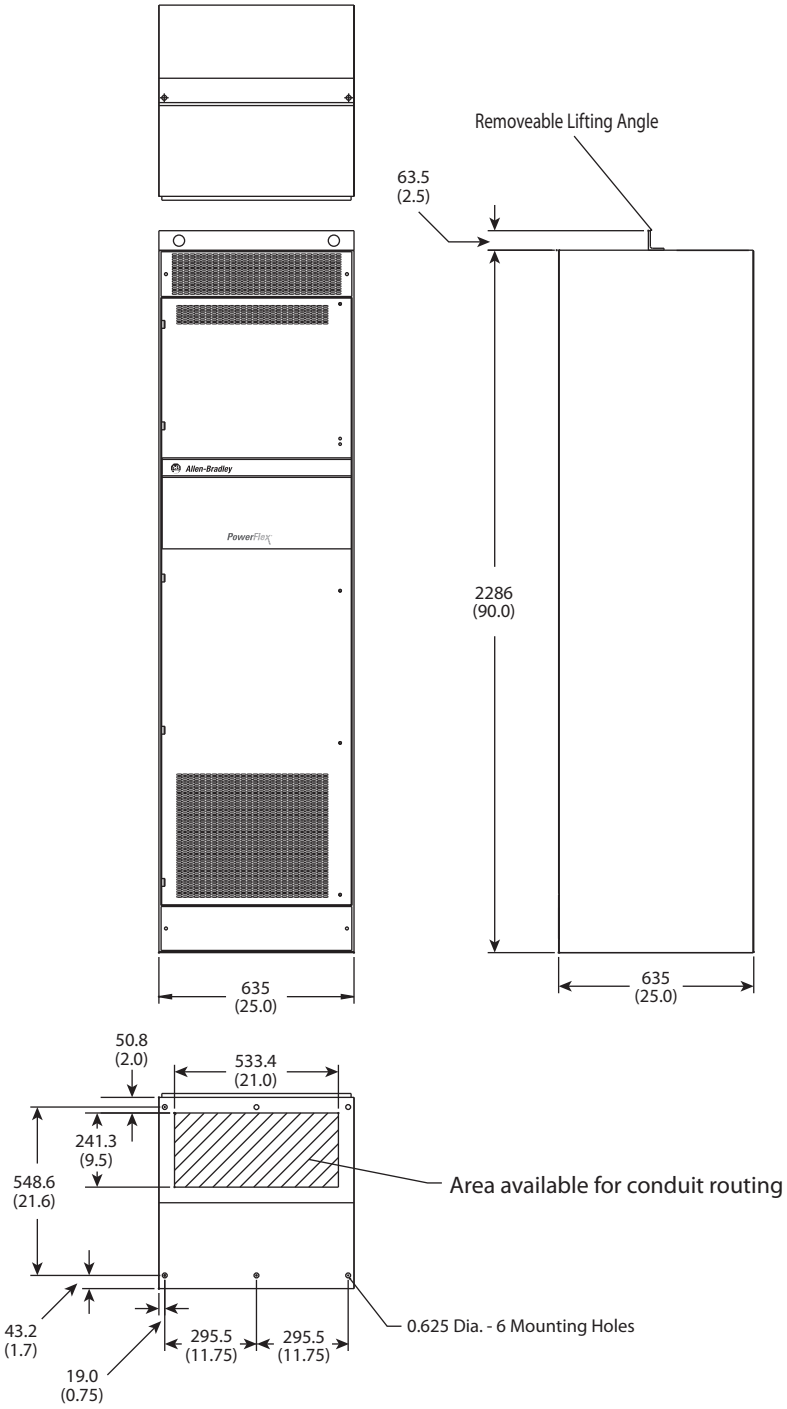
Dimensions are in millimeters and (inches).



Wire entry for this enclosure is between two pieces of soft foam. If the adjustable plate is slid back, a gap develops between the foam pieces. Otherwise, the foam acts as a loose gasket around the wires.

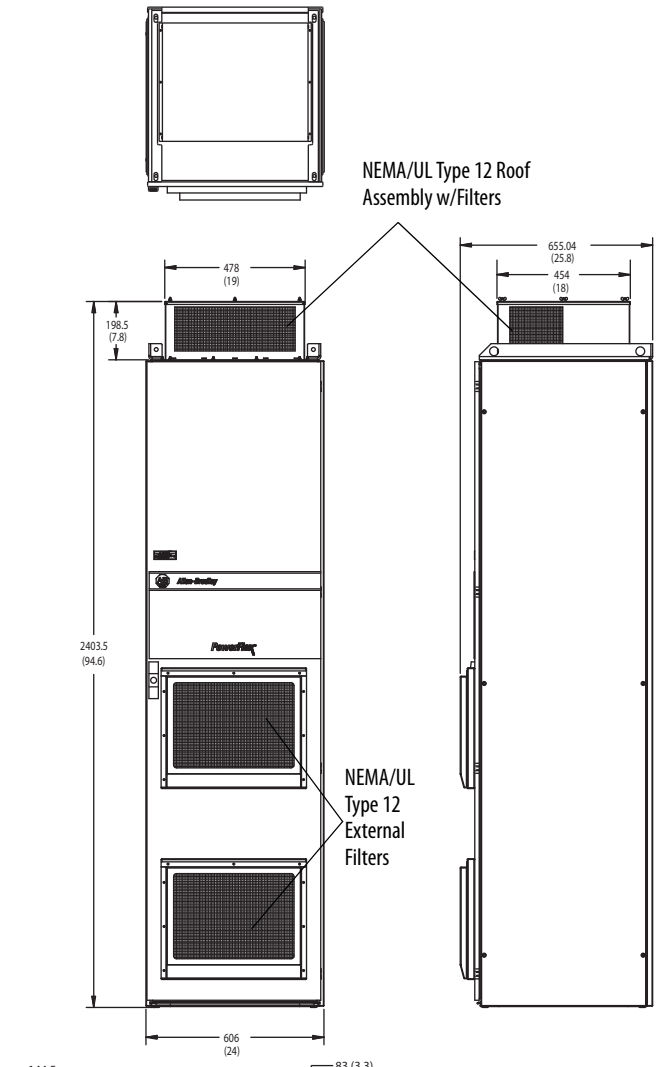
Frame 10 Enclosure Code B (NEMA/UL Type 1, IP20 MCC) and K (NEMA/UL Type 1, IP20 MCC w/Conformal Coat)

Dimensions are in millimeters and (inches).



Frame 10 Enclosure Code H (NEMA/UL Type 12 - IP54) and W (NEMA/UL Type 12 - IP54 w/Conformal Coat)

Dimensions are in millimeters and (inches).



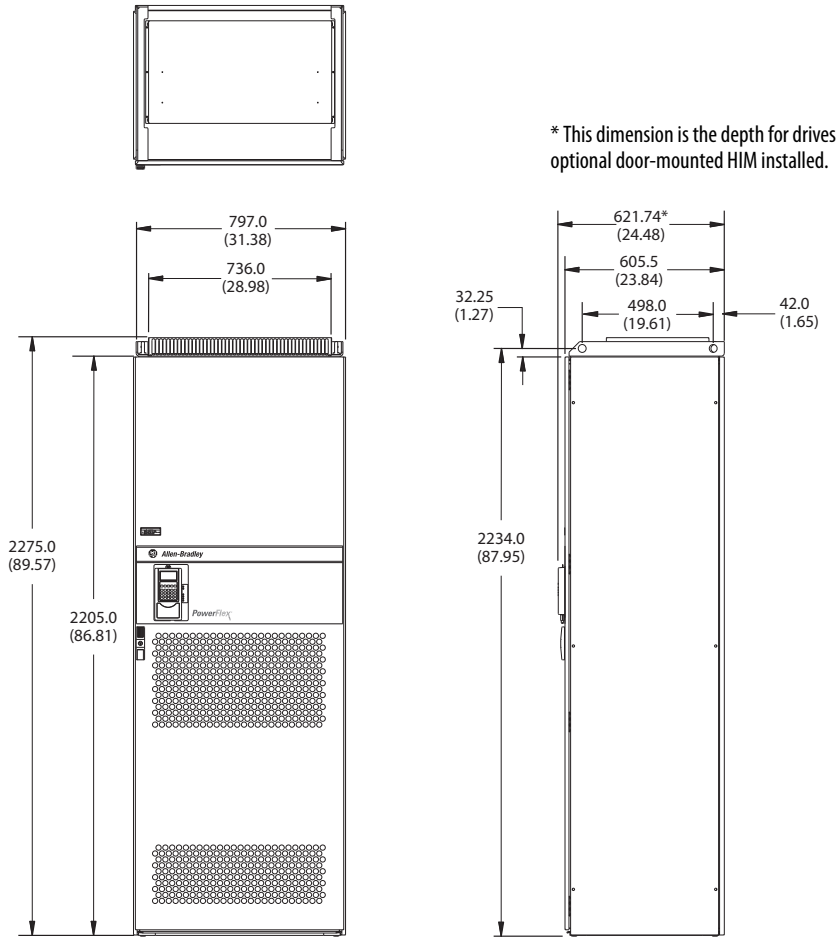
Wire entry for this enclosure is between two pieces of soft foam. If the adjustable plate is slid back, a gap develops between the foam pieces. Otherwise, the foam acts as a loose gasket around the wires.

Frame 10 Drive Weights

Voltage Class	Drive Rating Amps	Approx. Weight kg (lb) Drive & Enclosure (AC Input)	Approx. Weight kg (lb) Drive & Enclosure (DC Input)
400/480V AC (540/650V DC)	385	432 (952)	317 (699)
	460	432 (952)	317 (699)
	520	432 (952)	317 (699)
600/690V AC (810/932V DC)	261	370 (816)	317 (699)
	325	401 (884)	317 (699)
	385	401 (884)	317 (699)
	416	401 (884)	317 (699)

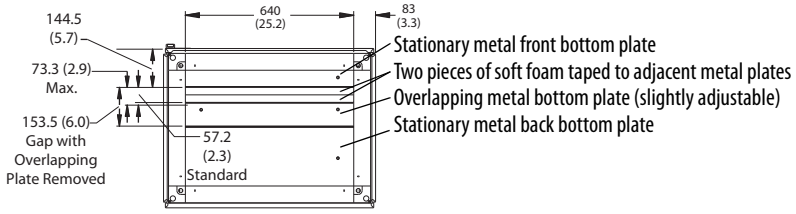
Frame 11 Enclosure Code A NEMA/UL Type 1 - IP21 and M (NEMA/UL Type 1, IP21 w/Conformal Coat)

Dimensions are in millimeters and (inches).



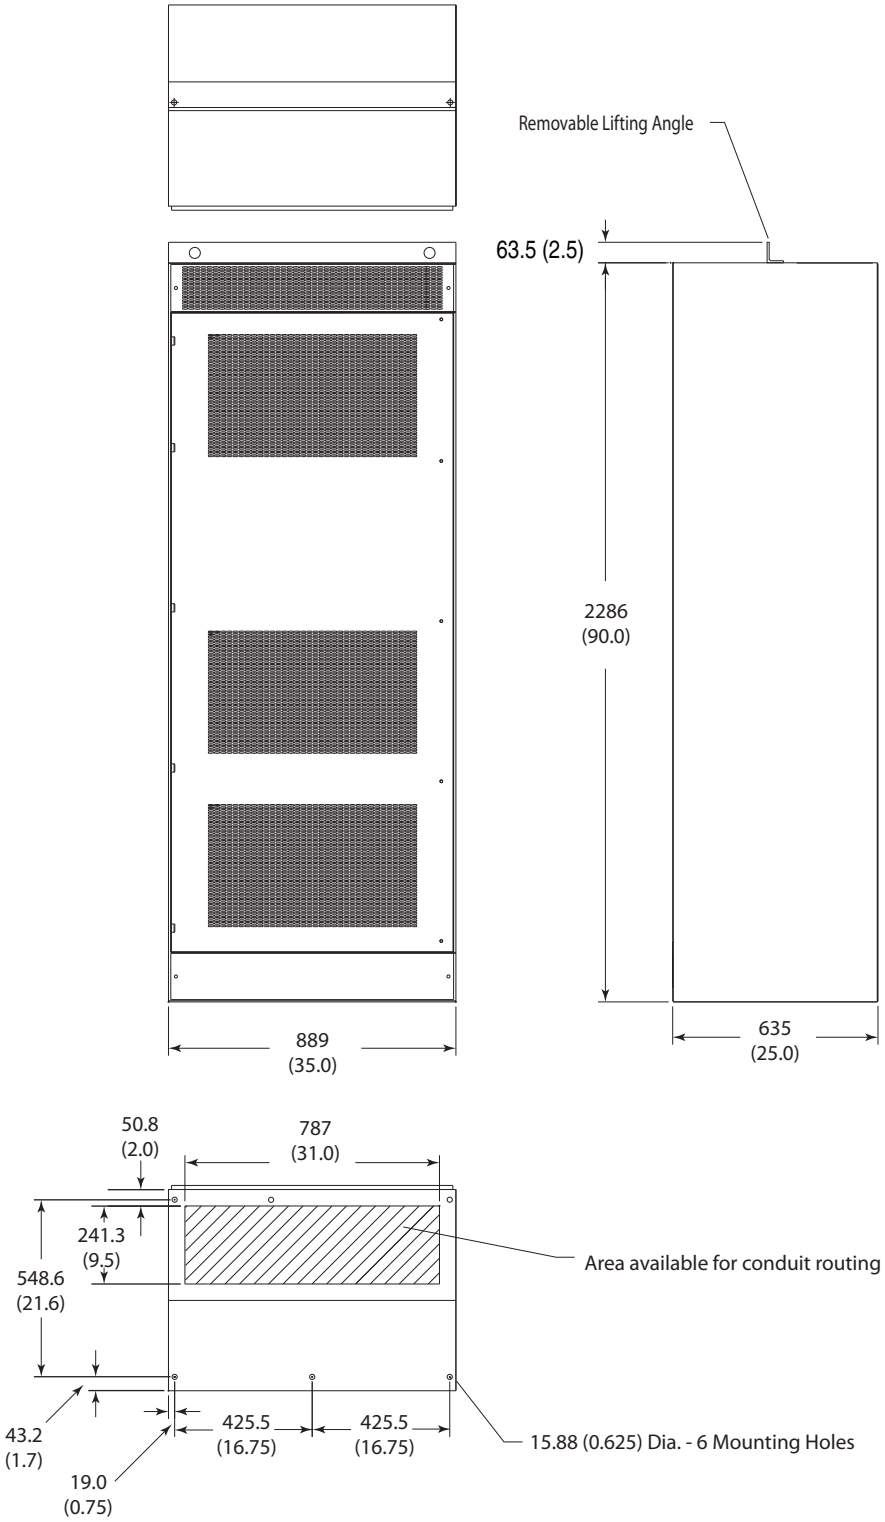
* This dimension is the depth for drives with the optional door-mounted HIM installed.

Wire entry for this enclosure is between two pieces of soft foam. If the adjustable plate is slid back, a gap develops between the foam pieces. Otherwise, the foam acts as a loose gasket around the wires.



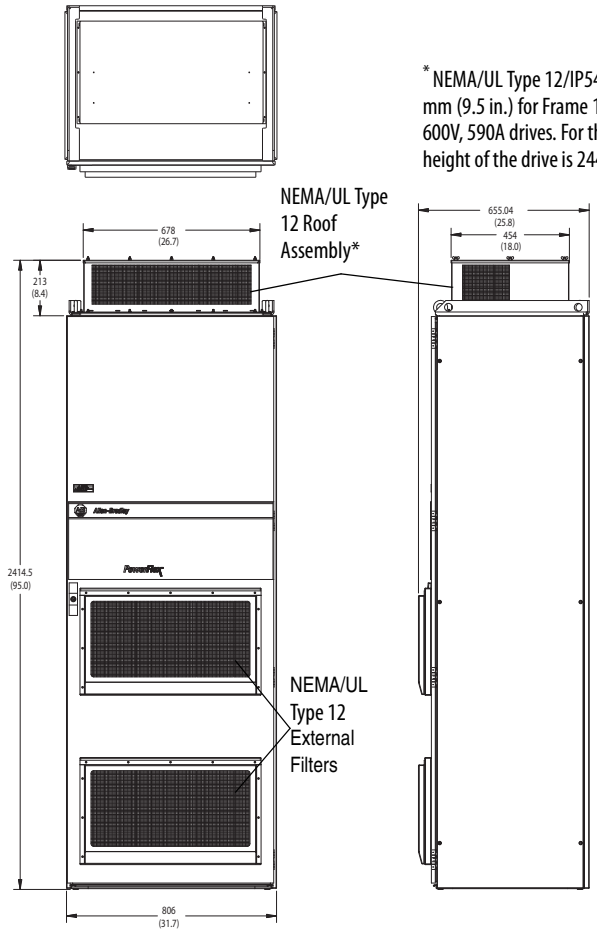
Frame 11 Enclosure Code B (NEMA/UL Type 1, IP20 MCC) and K (NEMA/UL Type 1, IP20 MCC w/Conformal Coat)

Dimensions are in millimeters and (inches).



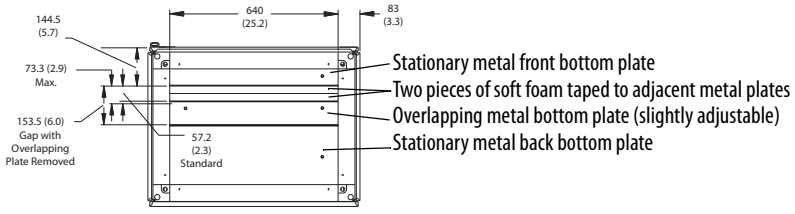
Frame 11 Enclosure Code H (NEMA/UL Type 12, IP54) and W (NEMA/UL Type 12 - IP54 w/Conformal Coat)

Dimensions are in millimeters and (inches).



* NEMA/UL Type 12/IP54 Roof Assembly is 242 mm (9.5 in.) for Frame 11, 400V 730A and 600V, 590A drives. For these drives, the total height of the drive is 2443.5 mm (104.5 in.).

Wire entry for this enclosure is between two pieces of soft foam. If the adjustable plate is slid back, a gap develops between the foam pieces. Otherwise, the foam acts as a loose gasket around the wires.

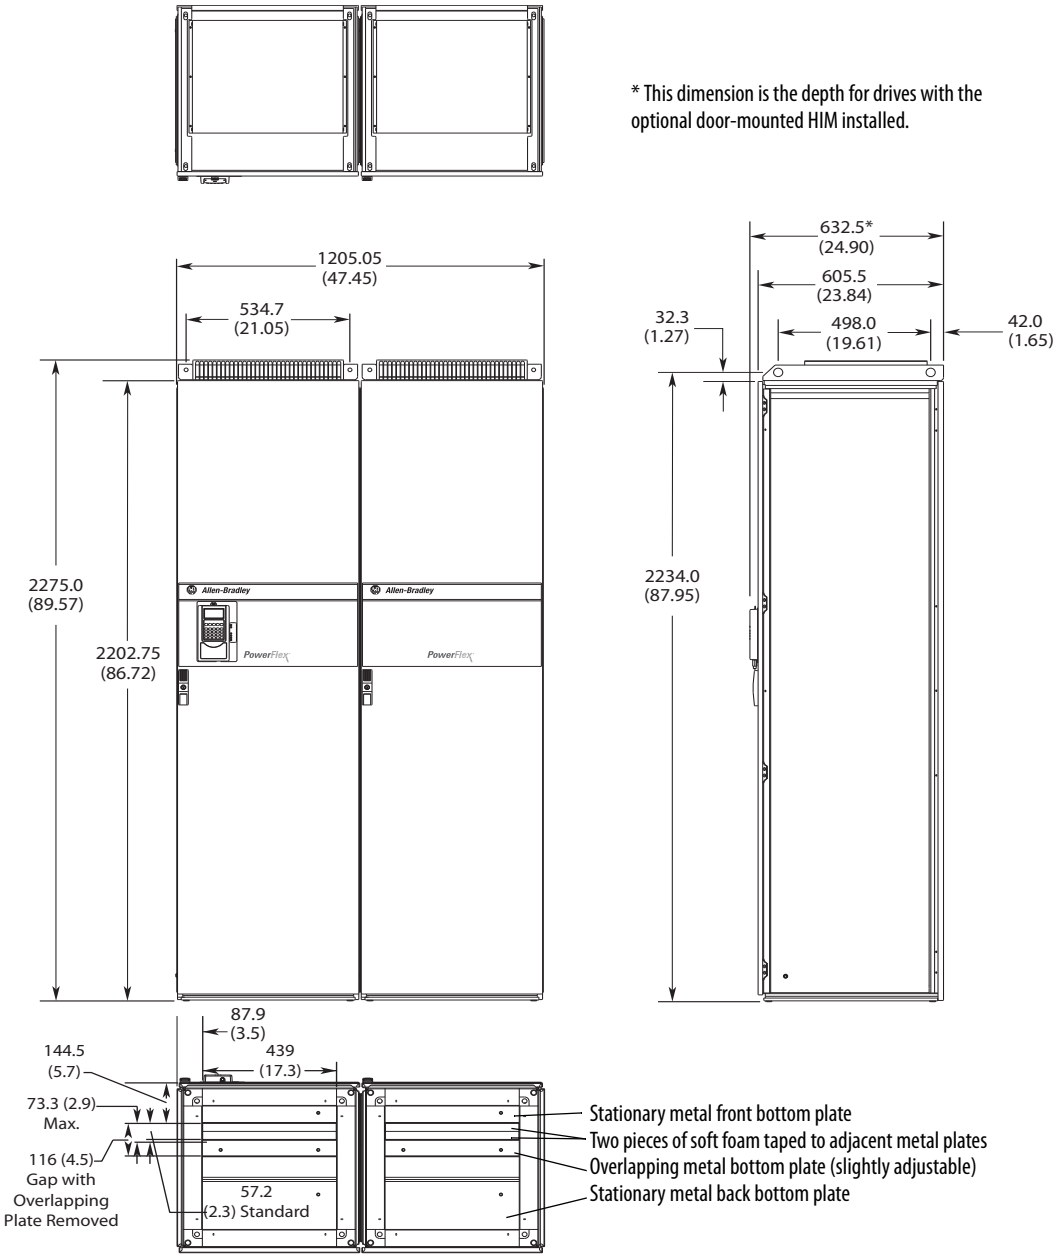


Frame 11 Drive Weights

Voltage Class	Drive Rating Amps	Approx. Weight kg (lb) Drive & Enclosure (AC Input)	Approx. Weight kg (lb) Drive & Enclosure (DC Input)
400/480V AC (540/650V DC)	590	614 (1354)	446 (983)
	650	614 (1354)	446 (983)
	730	614 (1354)	446 (983)
600/690V AC (810/932V DC)	460	561 (1237)	446 (983)
	502	561 (1237)	446 (983)
	590	676 (1490)	446 (983)

Frame 12, Enclosure Code A (NEMA/UL Type 1 - IP21) and M (NEMA/UL Type 1, IP21 w/Conformal Coat)

Dimensions are in millimeters and (inches).

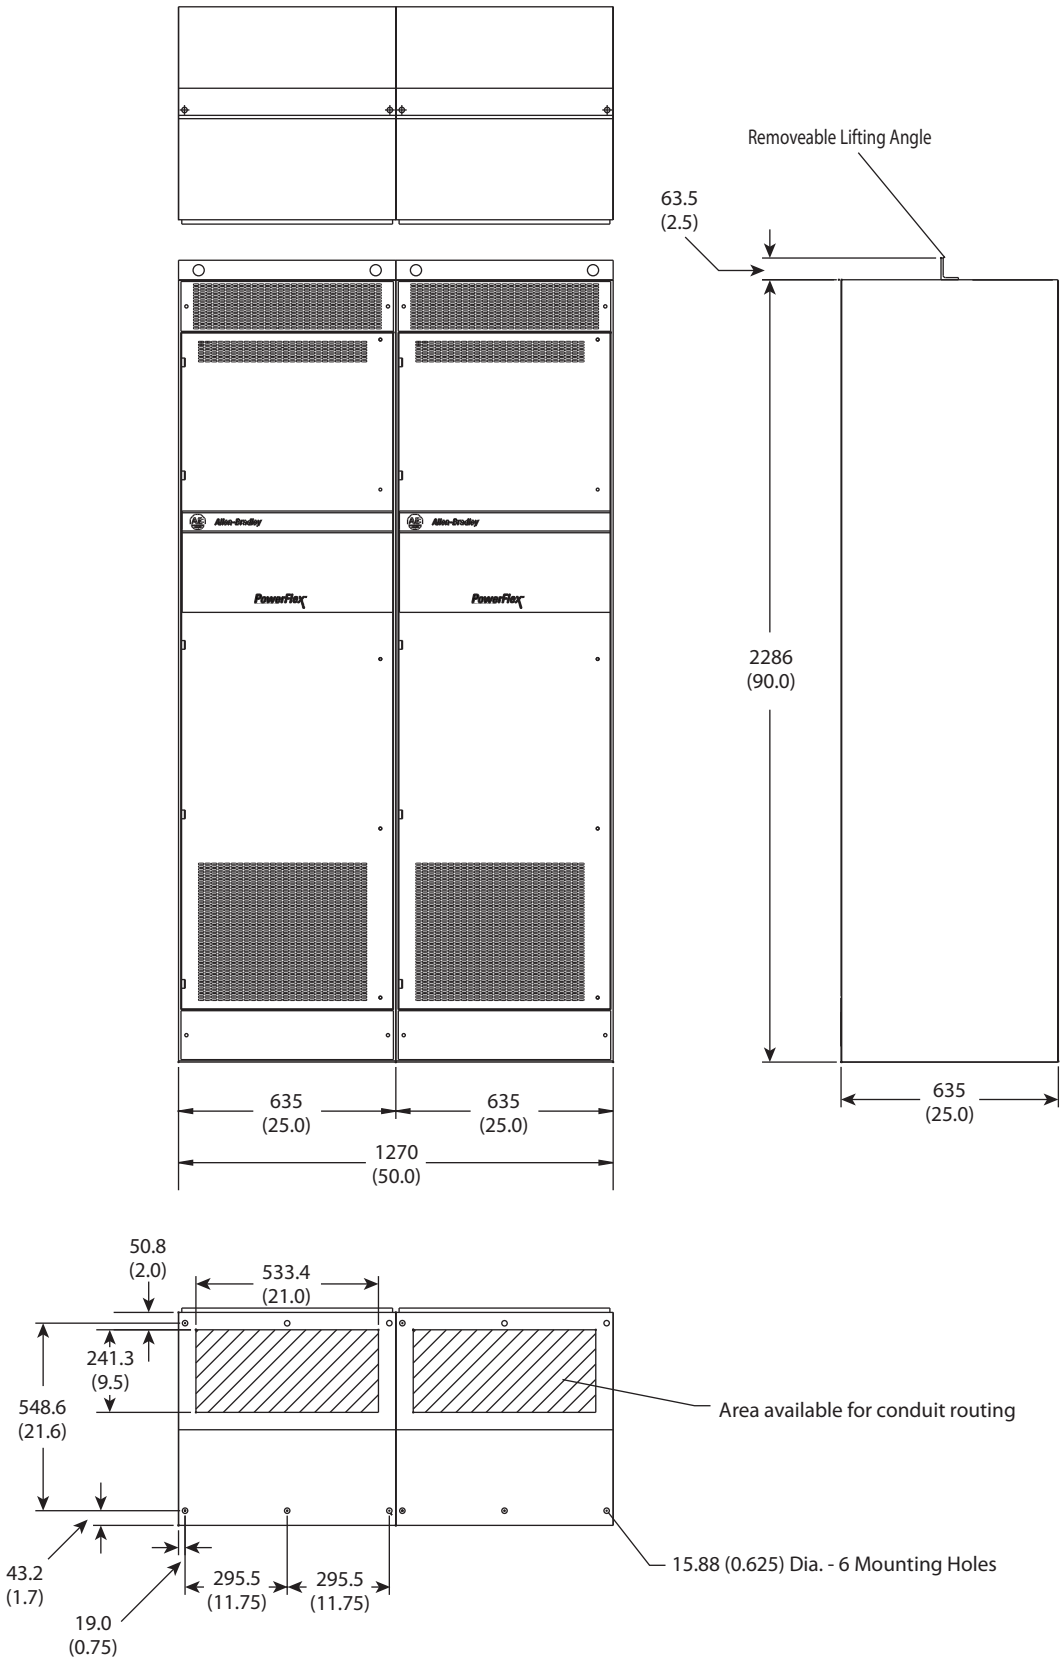


* This dimension is the depth for drives with the optional door-mounted HIM installed.

Wire entry for this enclosure is between two pieces of soft foam. If the adjustable plate is slid back, a gap develops between the foam pieces. Otherwise, the foam acts as a loose gasket around the wires.

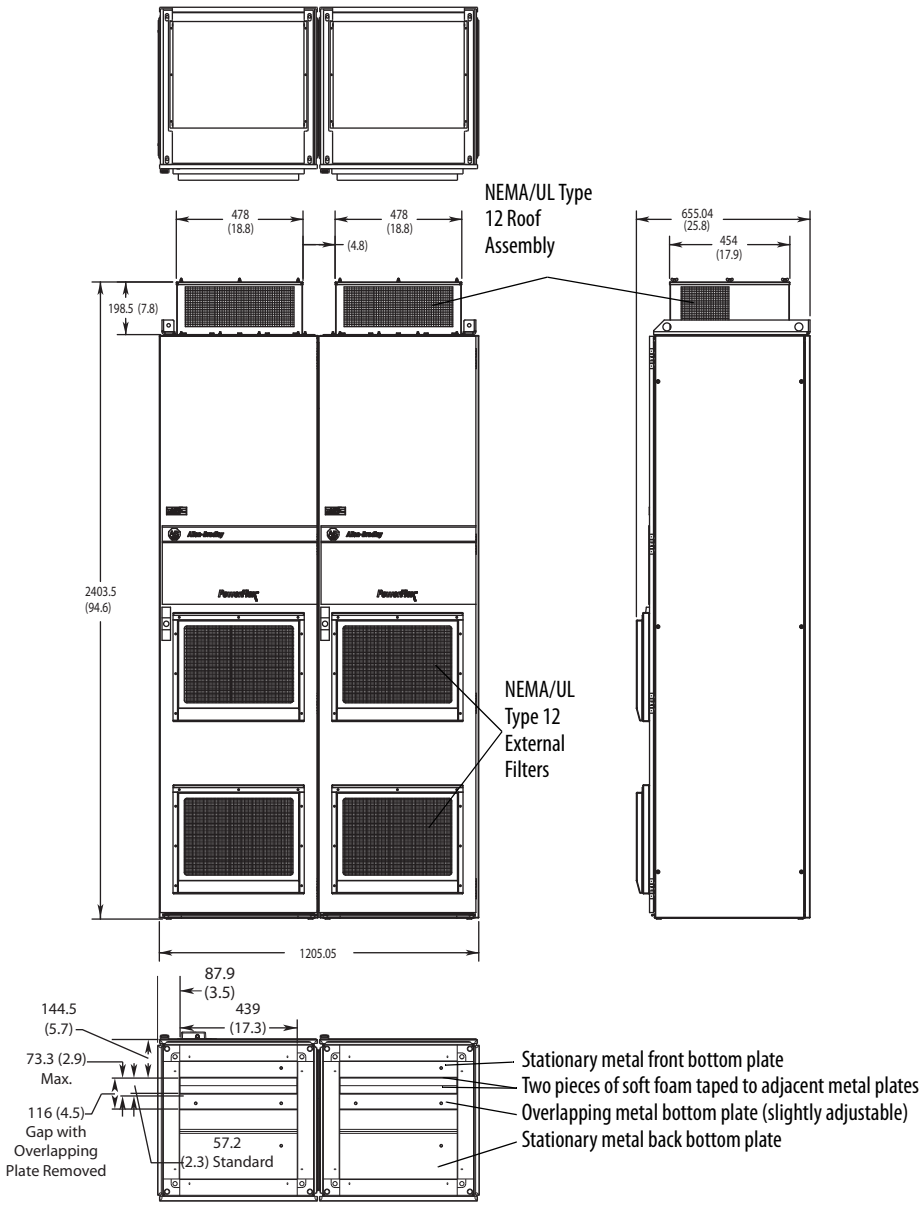
Frame 12 Enclosure Code B (NEMA/UL Type 1, IP21) and K (NEMA/UL Type 1, IP21 w/Conformal Coat)

Dimensions are in millimeters and (inches).



Frame 12 Enclosure Code H (NEMA/UL Type 12, IP54) and W (NEMA/UL Type 12, IP54 w/Conformal Coat)

Dimensions are in millimeters and (inches).



Wire entry for this enclosure is between two pieces of soft foam. If the adjustable plate is slid back, a gap develops between the foam pieces. Otherwise, the foam acts as a loose gasket around the wires.

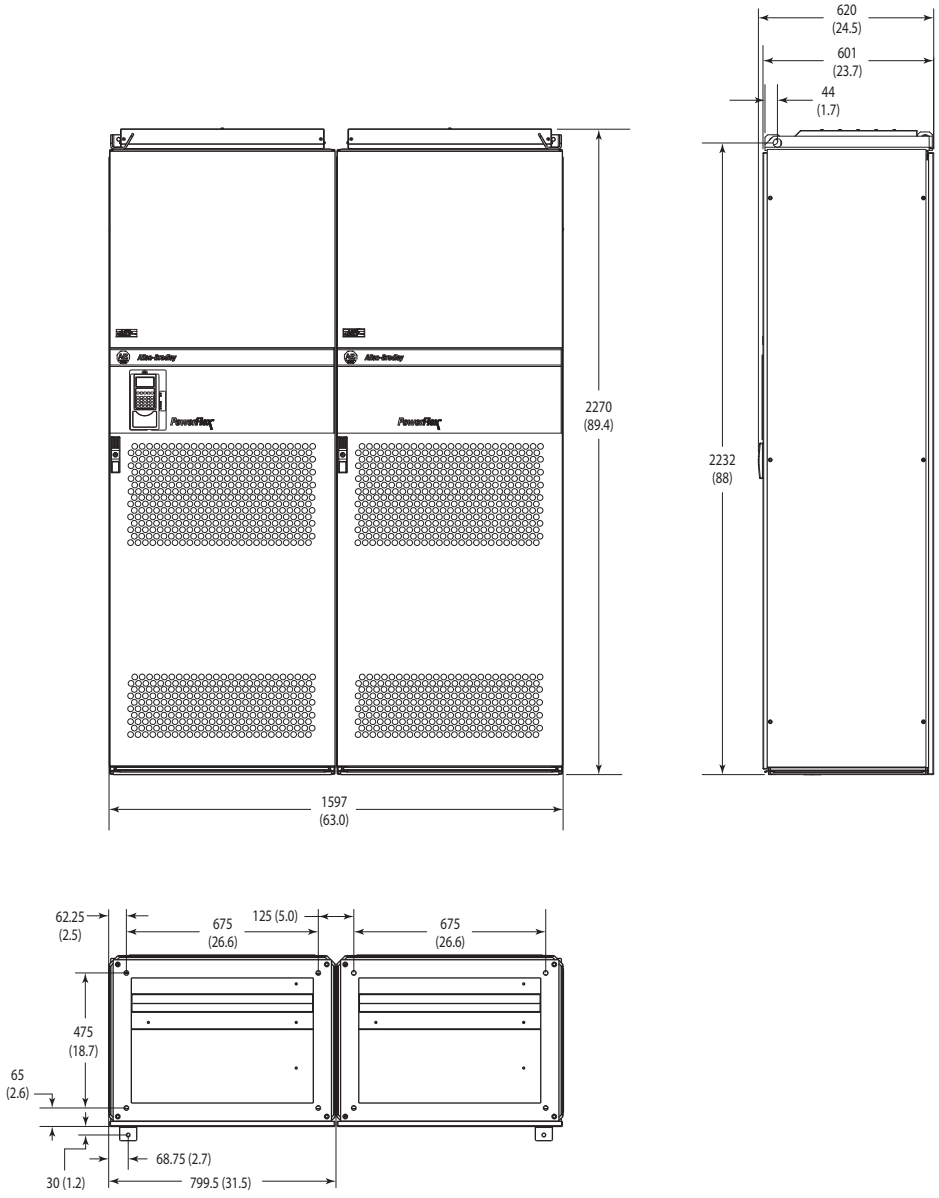
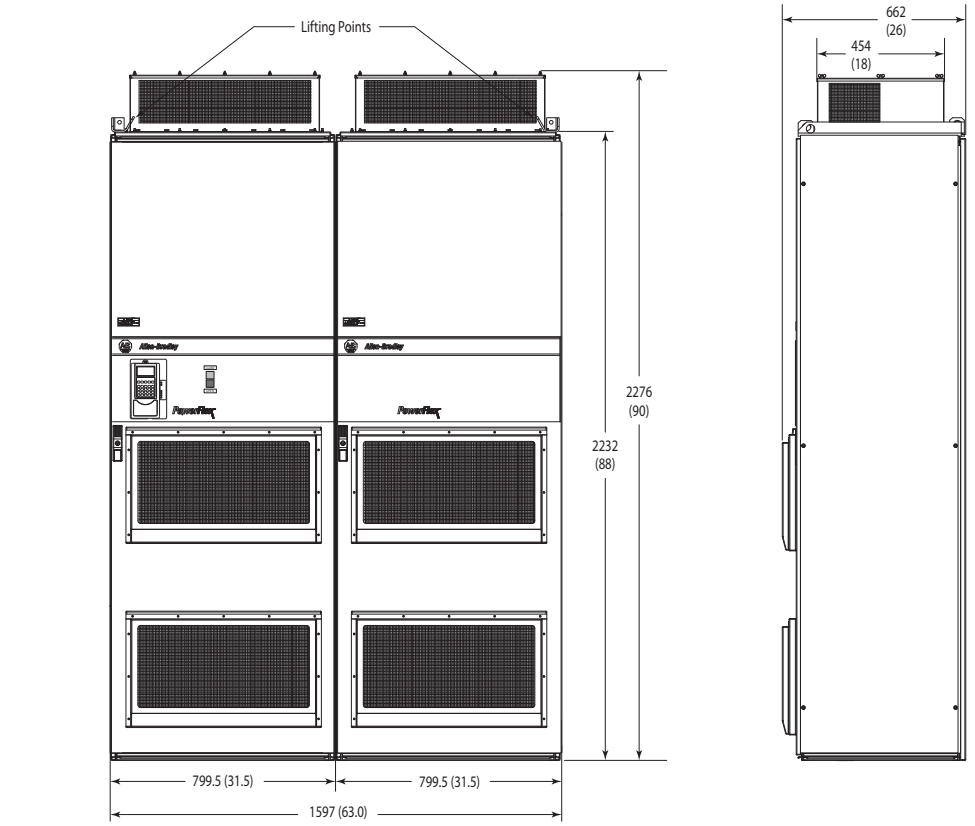
Frame 14 - DC Input Enclosure Code A (NEMA/UL Type 1, IP21) and M (NEMA/UL Type 1, IP21 w/Conformal Coat)

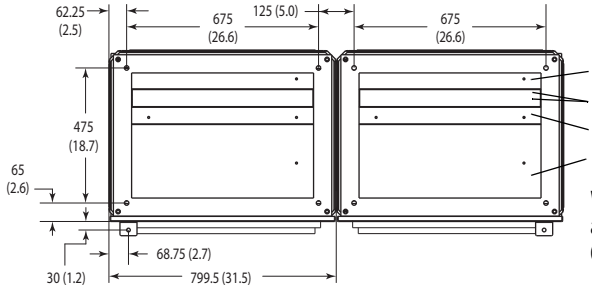
Dimensions are in millimeters and (inches).



Frame 14 - DC Input Drive Enclosure Code H (NEMA/UL Type 12, IP54) and W (NEMA/UL Type 12, IP54 w/ Conformal Coat)

Dimensions are in millimeters and (inches).





Stationary metal front bottom plate
Two pieces of soft foam taped to adjacent metal plates
Overlapping metal bottom plate (slightly adjustable)
Stationary metal back bottom plate

Wire entry for this enclosure is between two pieces of soft foam. If the adjustable plate is slid back, a gap develops between the foam pieces. Otherwise, the foam acts as a loose gasket around the wires.

Standard Drive Specifications

Category	Description	
Agency Certification	c UL us	Listed to UL508C and CAN/CSA-C2.2 No. 14-M91.
	CE	Marked for all applicable European Directives (1) EMC Directive (89/336/EEC) EN 61800-3 Adjustable Speed electrical power drive systems Low Voltage Directive (73/23/EEC) EN 50178 Electronic Equipment for use in Power Installations
	N223	Certified to AS/NZS, 1997 Group 1, Class A.
	II 2 G/D	Certified to ATEX directive 94/9/EC. Group II Category (2) GD Applications with ATEX Approved Motors (Gate Disable option card 20C-DG1 must be installed).
		The drive is also designed to meet the following specifications: NFPA 70 - US National Electrical Code NEMA ICS 7.1 - Safety standards for Construction and Guide for Selection, Installation and Operation of Adjustable Speed Drive Systems. IEC 146 - International Electrical Code.

(1) Applied noise impulses may be counted in addition to the standard pulse train causing erroneously high [Pulse Freq] readings.

Category	Specification	Description				
Protection	**Drive**	**380/400V**	**480V**	**500V**	**600V**	**690V**
	AC Input Overvoltage Trip:	611VAC	611VAC	611VAC	806VAC	806VAC
	AC Input Undervoltage Trip:	235VAC	235VAC	235VAC	326VAC	326VAC
	Bus Overvoltage Trip:	911VDC	911VDC	911VDC	1200VDC	1200VDC
	Bus Undervoltage Shutoff/Fault:	333VDC	333VDC	333VDC	461VDC	461VDC
	Nominal Bus Voltage (Full Load):	517VDC	621VDC	645VDC	776VDC	890VDC
	Heat Sink Thermistor:	Monitored by microprocessor overtemp trip				
	Drive Overcurrent Trip Software Overcurrent Trip: Hardware Overcurrent Trip: Instantaneous Current Limit:	 — 360% of rated Heavy Duty current (typical) —				
	Line transients:	up to 6000 volts peak per IEEE C62.41-1991				
	Control Logic Noise Immunity:	Showering arc transients up to 1500V peak				
	Power Ride-Thru:	15 milliseconds at full load				
	Logic Control Ride-Thru:	0.5 seconds minimum, 2 seconds typical				
	Ground Fault Trip:	Phase-to-ground on drive output				
	Short Circuit Trip:	Phase-to-phase on drive output				

Category	Specification	Description			
Environment	Altitude:	Up to 1000 m (3300 ft) above sea level without derating. Derate the drive by 1% for every 100 m (328 ft) above 1000 m (3300 ft), up to the following maximum installation altitudes: • 380V…400V AC input - 3000 m (9842.5 ft) • 415V…500V AC input - 2000 m (6561.7 ft) • 600V…690V AC input - 2000 m (6561.7 ft)			
	Maximum Surrounding Air Temperature without De-rating:	Based on drive rating, see Drive Ratings on page 37.			
	Storage Temperature (all const.):	–40…60 °C (–40…140 °F)			
	Atmosphere:	**Important:** Drive **must not** be installed in an area where the ambient atmosphere contains volatile or corrosive gas, vapors or dust. If the drive is not going to be installed for a period of time, it must be stored in an area where it will not be exposed to a corrosive atmosphere.			
	Relative Humidity:	5 to 95% non-condensing			
	Shock: Non-operational	15G peak for 11 ms duration (±1.0 ms)			
	Vibration:	2 mm (0.0787 in.) displacement, 1G peak EN50178 / EN60068-2-6			
	Sound:	Frame	Sound Level	Back-ground Noise Level	**Note**: Sound pressure level is measured at 1 meter. All devices measured are 400V IP21 and in power up mode.
		9	78 dba	49 dba	
		10	77 dba	49 dba	
		13	76d ba	46 dba	
Electrical	AC Input Voltage Tolerance:	±10%			
	Frequency Tolerance:	47…63 Hz			
	Input Phases:	Three-phase input provides full rating for all drives. Single-phase operation provides 50% of rated current.			
	Displacement Power Factor:	0.98 across entire speed range.			
	Efficiency:	97.5% at rated amps, nominal line volts.			
	Maximum Short Circuit Rating:	≤ 200,000 Amps symmetrical.			
	Actual Short Circuit Rating:	Determined by AIC rating of installed fuse/circuit breaker.			
	Maximum Drive to Motor Power Ratio:	Recommended not greater than 2:1 ratio.			
Control	Method:	Sine coded PWM with programmable carrier frequency. Ratings apply to all drives (refer to the *Derating Guidelines* in the PowerFlex Reference Manual). The drive can be supplied as 6 pulse or 12 pulse in a configured package.			
	Carrier Frequency:	1…6 kHz			
	Output Voltage Range:	0 to rated motor voltage			
	Output Frequency Range:	0 to 320 Hz			
	Frequency Accuracy Digital Input: Analog Input:	 Within ±0.01% of set output frequency. Within ±0.4% of maximum output frequency.			
	Frequency Control:	Speed regulation - with Slip Compensation 0.5% of base speed across 40:1 speed range 40:1 operating range			
	Selectable Motor Control:	Sensorless Vector with full tuning. Standard V/Hz with full custom capability.			
	Stop Modes:	Multiple programmable stop modes including - Ramp, Coast, DC-Brake, Ramp-to-Hold and S-curve.			
	Accel/Decel:	Two independently programmable accel and decel times. Each time may be programmed from 0 to 3276.7 seconds in 0.1 second increments.			
	S-Curve Time:	0…100% of accel/decel time.			
	Intermittent Overload:	110% Overload capability for up to 1 minute 150% Overload capability for up to 2 seconds			
	Current Limit Capability:	Proactive Current Limit programmable from 20 to 160% of rated output current. Programmable proportional gain.			
	Electronic Motor Overload Protection:	Class 10 motor overload protection according to NEC article 430 and motor over-temperature protection according to NEC article 430.126 (A)(2). UL 508C File E59272.			

Derating Guidelines

Configured Drives Program

Program Description

The PowerFlex 700H Configured Drives Program allows users to create drive packages based on their specific needs. This program enhances standalone drive functionality through additional control, power and packaging options which are ideal for OEM and end users with special installation needs.

The Configured Drives Program offers users the ability to create drive packages that go beyond the standard drives offering. Catalog numbers and pricing are provided to allow quotation without requesting a custom quote from the factory.

- Assembling a catalog string and total list price for quotation purposes.
  A complete Configured Drive catalog number and total list price is created by taking the applicable base drive and options entirely from the Configured Drives Program.

- Entering an order on Passport.
  Enter a custom quote request on Passport using "SP-SDB-CUSTOM" as the line item part number and entering the complete catalog string and total list price in the Competitive Summary. For questions or help with a custom quote or order entry, please contact the Configured Drives Group at 262-512-8415.

Target Lead Times

Lead Times provided on the following pages are based on the codes shown below. Note that lead times may vary from those shown due to manufacturing capacity and parts availability. See Passport for current lead times.

Code	Description	Lead Time (Work Days)
P	Pre-Engineered (applies to Catalog Configured)	60
Q	Quick Turn	60
X	Long Lead Time	60 (1)
C	Custom	Consult Factory

(1) Dependent on options selected.

650	650 (590)	500 (500)
730 ✶	708 (650)	600 (500)
820 ✶	820 (708)	700 (600)
920	920 (820)	800 (700)
1K0	1030 (920)	900 (800)
1K1	1150 (1030)	1000 (900)
1K3	1300 (1150)	1200 (1000)
1K4	1450 (1180)	1250 (1000)
1K7	1770 (1600)	1500 (1400)
2K1	2150 (1940)	1900 (1700)
2K7	2700 (2300)	2300 (2000)

700H drives include an input line reactor as standard.

✶ Current ratings are matched to NEC or typical motor ampere requirements. Ratings up to drive output amps are available with a custom quote.

⌘ 6 Pulse drives only.

❖ 18 Pulse drives only.

How to Order

- **Step 1**. Select the PowerFlex 700H Base Drive Catalog Number and required options from the Configured Drives Option section below.

- **Step 2**. Specify additional required options (starting on page XX). The listing is divided into simple categories to assist in quickly locating specific needs. Some options are horsepower and/or voltage specific, or will have special rules associated with them – Read all footnotes.

- **Step 3**. After generating a complete catalog number string, do an Option Compatibility Check by referring to the table starting on page XX.

- **Step 4**. Entering an order on Passport.
  Note that a "C" lead time requires a custom quote. Enter a custom quote request on Passport using "SP-SDB-CUSTOM" as the line item part number and entering the complete catalog string and total list price in the Competitive Summary. For questions or help with a custom quote or order entry, please contact the Configured Drives Group at 262-512-8415.

Example: A refrigeration plant application requires a variable speed control for an existing 500 Hp, 480V AC, 580A conveyor motor. Both drive and motor will be located in a clean, but cold environment. Local 115V control is required for programming, start, stop, and speed. Speed reference must be selectable from a remote location as well. The motor has an internal heater requiring power. A system disconnect switch is user supplied and drive branch circuit fusing is required. Control power is required.

Configured Drives Options

IMPORTANT The final lead time for the complete drive is based on the longest option lead time.

Configured Drives Product Selection

Package includes:

- PowerFlex 700H 480V Drive
- NEMA Type 1 Freestanding Enclosure
- User Manual

IMPORTANT Customers that require drives with low harmonic front ends, generally will have an associated specification with their detailed requirements. Failure to ask for a customer specification, and the proper review of that specification, may result in significant price and/or delivery changes.

Drawing and Test Options (For Configured Drives Only)

Description - One Set of . . .	Cat. No.
Manufacturing Drawings 279 x 432 mm (11 x 17 in.) One set of schematics – "Information Only - Manufacture Proceeding" Not to be used as Approval Drawings, available after order is released from engineering.	
Electronic Drawings (Requires E-mail Address)	1301-MFDWG-E
Final Drawings (as shipped) 279 x 432 mm (11 x 17 in.) One set of schematics – "Copy of Drawings that Shipped with the Job"	
Electronic Drawings (Requires E-mail Address)	1301-FINDWG-E
Test Report, Drive Only (Requires E-mail Address)	1301-TESTR-E
Approval Drawings 279 x 432 mm (11 x 17 in.) One set of schematics – "Manufacture Held Until Approved Prints are Received"	
Electronic Drawings (Requires E-mail Address)	1301-APPDWG-E
As Commissioned Drawings 279 x 432 mm (11 x 17 in.) One set of schematics – "Provided after Field Changes are Returned to the Factory"	
Electronic Drawings (Requires E-mail Address)	1301-COMDWG-E
Analysis, Testing and Test Reports	
Basic Harmonic Analysis - Basic calculations and preliminary analysis from one line power distribution diagram.	1301-HARM1
Complete Harmonic Analysis - Detailed harmonic spectrum analysis and a written report.	1301-HARM2
Witness Test, User Viewing of Rockwell Automation Standard Test Procedures	1301-WT (1)

(1) Includes viewing Rockwell Automation standard test only. Any special requirements must be reviewed by Rockwell Automation for acceptance and possible price changes. Pricing is per drive.

Configured Drives Codes and Standards

Code/Standard		Action
CE [1] **(European Conformance Standard)**	CE	Consult the factory with requirements to meet the separate Low Voltage and/or EMC directives.
IEEE519 [1] **(Harmonic Distortion Levels)**		Provide a one-line power distribution drawing, and the associated specification to the factory, for review. If an 18 pulse drive is being utilized, the drive will automatically meet IEEE519 at the drive input terminals (no power distribution review is required).
UL, c-UL	c UL US LISTED	This program can provide UL panel recognition from the factory by adding a "-UL" to the catalog string. There is no charge for this option.

(1) Custom Drives Program Only - Request quote.

Option Selection Reference Guide - 6 Pulse

Required Options:

- Normal Duty or Heavy Duty
- Power Disconnecting Means or No Power Disconnecting Means
- Bypass or No Bypass
- Control Power or No Control Power when dependent options are selected

-B0	One of -B0 or B1/B51 Required	-B1/B51, B2//B52
-B1/B51	One of -B0 or B1/B51 Required	-B0, L2, L4, P2, P3, P6, P12
-C1	One of -C1 or C5 Required	-C5
-C5	One of -C1 or C5 Required	-C1
-P1	One of -P1, P2, P3, P4, P6 or P7 Required	-P2, P3, P4, P6, P7
-P2	One of -P1, P2, P3, P4, P6 or P7 Required	-P1, P3, P4, P6, P7
-P3	One of -P1, P2, P3, P4, P6 or P7 Required	-P1, P2, P4, P6, P7, B1
-P4	One of -P1, P2, P3, P4, P6 or P7 Required, -B1	-P1, P2, P3, P6, P7
-P6	One of -P1, P2, P3, P4, P6 or P7 Required	-P1, P2, P3, P4, P7, B1
-P7	One of -P1, P2, P3, P4, P6 or P7 Required, -B1	-P1, P2, P3, P4, P6

Non-Required Options (6 Pulse)

Description	Must be Used with . . .	Cannot be Used with . . .
-B2/B52	-B1/B51 & J2	-B0, P12
-E4		
-E9	Customer Supplies Message	
-G1		
-J1		
-J2		Only 2 drive digital outputs
-J3		Only 2 drive digital outputs
-J4		Only 2 drive digital outputs
-J5		Only 2 drive digital outputs
-J8/J58	-J4	
-L2		
-M3	-J4	
-M5

Option Selection Reference Guide - 18 Pulse

Required Options:

- Normal Duty or Heavy Duty
- Drive Input Fusing
- Bypass or No Bypass
- Control Power or No Control Power when dependent options are selected

Base Drive (18 Pulse)

Description	Must be Used with . . .	Cannot be Used with . . .
Drive (position a)	21C	
Input Voltage (position b)	U	
Rating (position c)	One of the ratings shown	
Enclosure (position d)	B Only	
HIM (position e)	One of 0, 3, 5, A, C, E, F, G, J, K or L	
Documentation (position f)	A	
Brake IGBT (position g)	One of Y or N	
Brake Resistor (position h)	N or Y	
Emission (position i)	One of C or N	
Comm Slot (position j)	C, D, E, H, I, L, N (Std.), P, R, S	More than One Drive Mounted Comm Option
I/O (position k)	One of C or D	
Feedback (position l)	0 or 1	
Reserved (position m)	NN	Applications Requiring Feedback
Reserved (position n)	NN	
Duty (position p)	One of ND or HD	

Required Options (18 Pulse)

Description	Must be Used with . . .	Cannot be Used with . . .
-B0 (One of B0, B1/B51 Required)	One of -B0 or B1/B51 Required	-B1/B51, P4, P8, P10
-B1/B51 (One of B0, B1/B51 Required)	One of -C1 or C5 and One of -P10 or P4, P4 & P10 or P8 & P10	-B0, B1/B51, B2/B52, P12, S1/S51…S18/S68, P8 Only
-C1 (One of C1 or C5 Required)		-C5
-C5 (One of C1 or C5 Required)		-C1
-P2 (Default)		-P6
-P3 (Only One Disconnect Device Allowed)	-P2	-P4, P6, P8
-P4 (Only One Disconnect Device Allowed)	-B1/B51, P2	-P3, P6, P8, B0
-P6 (Only One Disconnect Device Allowed)		-P2, P3, P4, P8
-P8 (Only One Disconnect Device Allowed)	-P10, P2	-P3, P4, P6, B0
-P10	-P2 or P6	-B0

Non-Required Options (18 Pulse)

Description	Must be Used with . . .	Cannot be Used with . . .
-B2/B52	-B1/B51 & J2	-B0, B1/B51, B2/B52, P12
-E9	Customer Supplies Message	
-G1		HIM Codes 3, A…G, Vector Control I/O (C or D)
-J1		
-J2		Only 2 drive digital outputs
-J3		Only 2 drive digital outputs
-J4		Only 2 drive digital outputs
-J5		Only 2 drive digital outputs
-J8/J58	-J4	-J8/58, S1/S51…S18/S68
-L2		
-M3	-J4	
-N1		
-N2		-S18/S68
-N3		
-N5	-S1/S51

Recommended Documentation

For additional PowerFlex 700H Drive data and information, refer to the following publications available on the Rockwell Automation Literature Library: www.rockwellautomation.com/literature.

Title	Publication
PowerFlex 700H Drives Programming Manual	20C-PM001…
PowerFlex 700S and 700H Installation Instructions (Frames 9 - 14)	PFLEX-IN006...
Wiring and Grounding for PWM AC Drives	DRIVES-IN001...
Safety Guidelines for the Application, Installation and Maintenance of Solid State Control	SGI-1.1...
A Global Reference Guide for Reading Schematic Diagrams	100-2.10...
Guarding Against Electrostatic Damage	8000-4.5.2...

Additional Resources

These documents contain additional information concerning related products from Rockwell Automation.

Resource	Description
Industrial Automation Wiring and Grounding Guidelines, publication 1770-4.1	Provides general guidelines for installing a Rockwell Automation industrial system.
Product Certifications website, http://www.ab.com	Provides declarations of conformity, certificates, and other certification details.

You can view or download publications at http://www.rockwellautomation.com/literature/. To order paper copies of technical documentation, contact your local Allen-Bradley distributor or Rockwell Automation sales representative.

Important User Information

Solid-state equipment has operational characteristics differing from those of electromechanical equipment. Safety Guidelines for the Application, Installation and Maintenance of Solid State Controls (publication SGI-1.1 available from your local Rockwell Automation sales office or online at http://www.rockwellautomation.com/literature/) describes some important differences between solid-state equipment and hard-wired electromechanical devices. Because of this difference, and also because of the wide variety of uses for solid-state equipment, all persons responsible for applying this equipment must satisfy themselves that each intended application of this equipment is acceptable.

In no event will Rockwell Automation, Inc. be responsible or liable for indirect or consequential damages resulting from the use or application of this equipment.

The examples and diagrams in this publication are included solely for illustrative purposes. Because of the many variables and requirements associated with any particular installation, Rockwell Automation, Inc. cannot assume responsibility or liability for actual use based on the examples and diagrams.

No patent liability is assumed by Rockwell Automation, Inc. with respect to use of information, circuits, equipment, or software described in this manual.

Reproduction of the contents of this manual, in whole or in part, without written permission of Rockwell Automation, Inc., is prohibited.

Documentation Feedback

Your comments will help us serve your documentation needs better. If you have any suggestions on how to improve this document, complete this form, publication RA-DU002, available at http://www.rockwellautomation.com/literature/.
